

A landscape photograph of a volcanic mountain range during sunset or sunrise. The sky is filled with large, billowing clouds colored in shades of orange, yellow, and white, illuminated by the low sun. In the foreground, there are dark, silhouetted shapes of hills or mountains. The overall atmosphere is dramatic and hazy.

Real Time Tracking of Earthquake Swarms

*M. E. West & G. Thompson, Geophysical Institute / Alaska Volcano Observatory
University of Alaska Fairbanks*

- 1. Motivation**
- 2. Method (Real-time system)**
 - Event catalog
 - Swarm tracking module
 - Alarm manager

 - Yellowstone 2010
- 5. Conclusions**

Why develop alarm systems?

- Help prevent loss of life & injuries
- Rapid notification
- Mitigate burn out of observatory staff during prolonged unrest
- Inexpensive to operate
- Objective
- Effective replacement for periodic seismic checks (e.g. every 2 hours)
- Complementary to 24/7 visual monitoring
- Essential without it

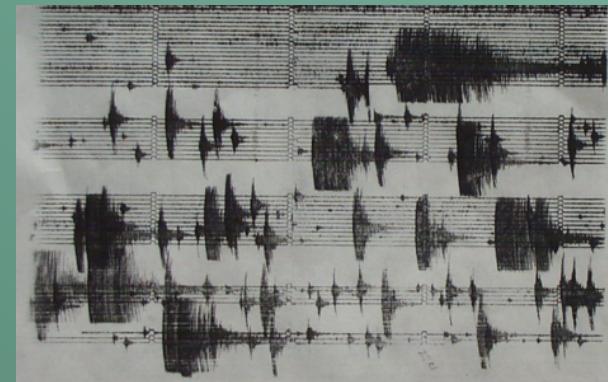

Seismic precursors to eruptions

Generic volcano earthquake swarm model (McNutt, 1996)

EYJAFJALLAJOKULL (SI/USGS Weekly Volcanic Activity Report 14-20 April 2010)

- “This eruptive phase was preceded by a swarm of earthquakes and the onset of tremor”
- Ella-fyat-la-yo-kut (Island-Mountain-Glacier)

2009-2-27 18:14

Early warning systems

Explosive eruptions

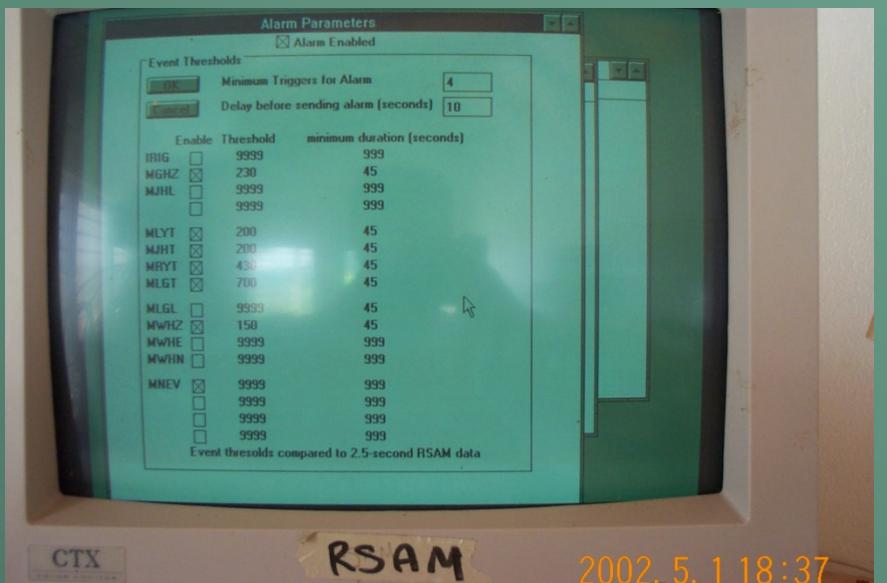

Pyroclastic flows & surges

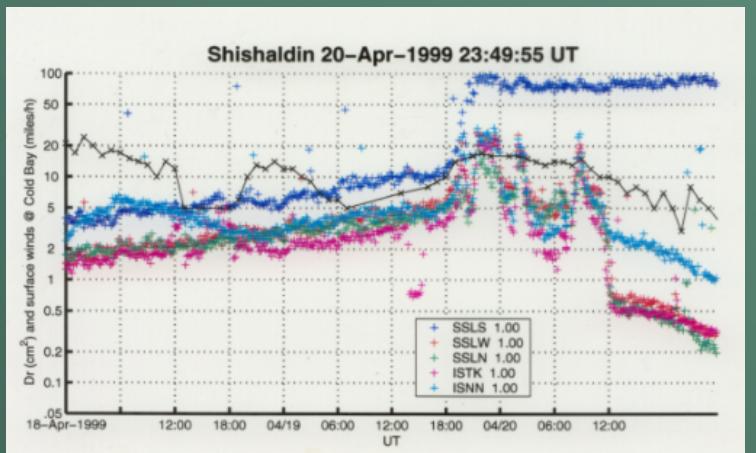

Lahars

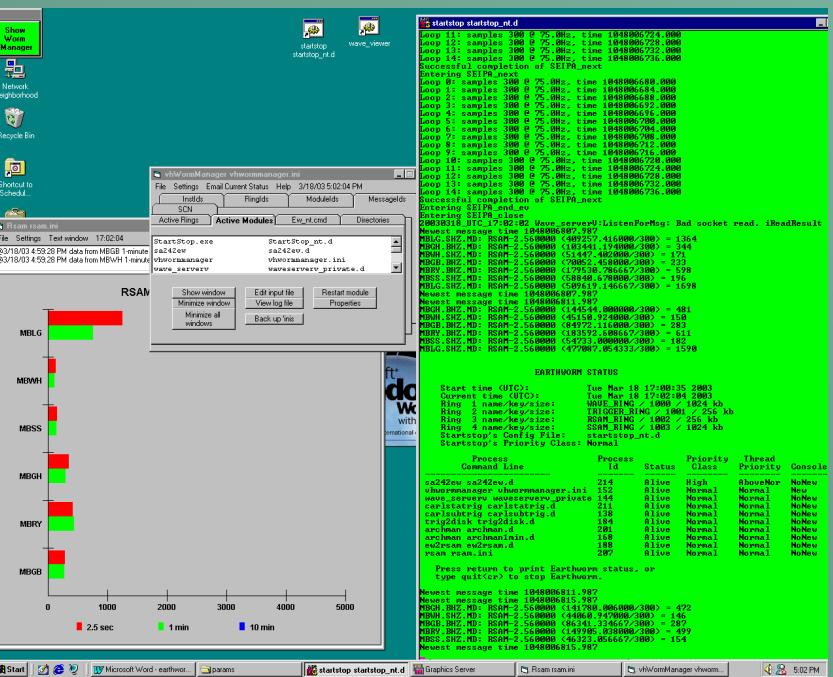

Minutes to sound sirens & inform local/aviation authorities

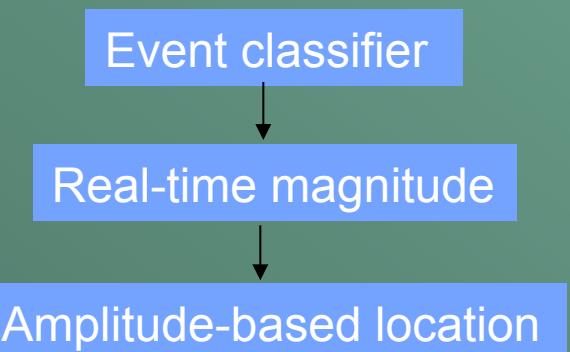

RSAM (?-2000)

IceWeb (1998-pres.)

Glowworm (2000-pres.)

MVO alarm system (2001-2003)

Okmok 12th July 2008

- VEI 4 eruption
- Less than 5 hours precursory seismicity
- Seismicity only ramped up significantly 1 hour prior to eruption
- AVO – visual data checks every 12 hours

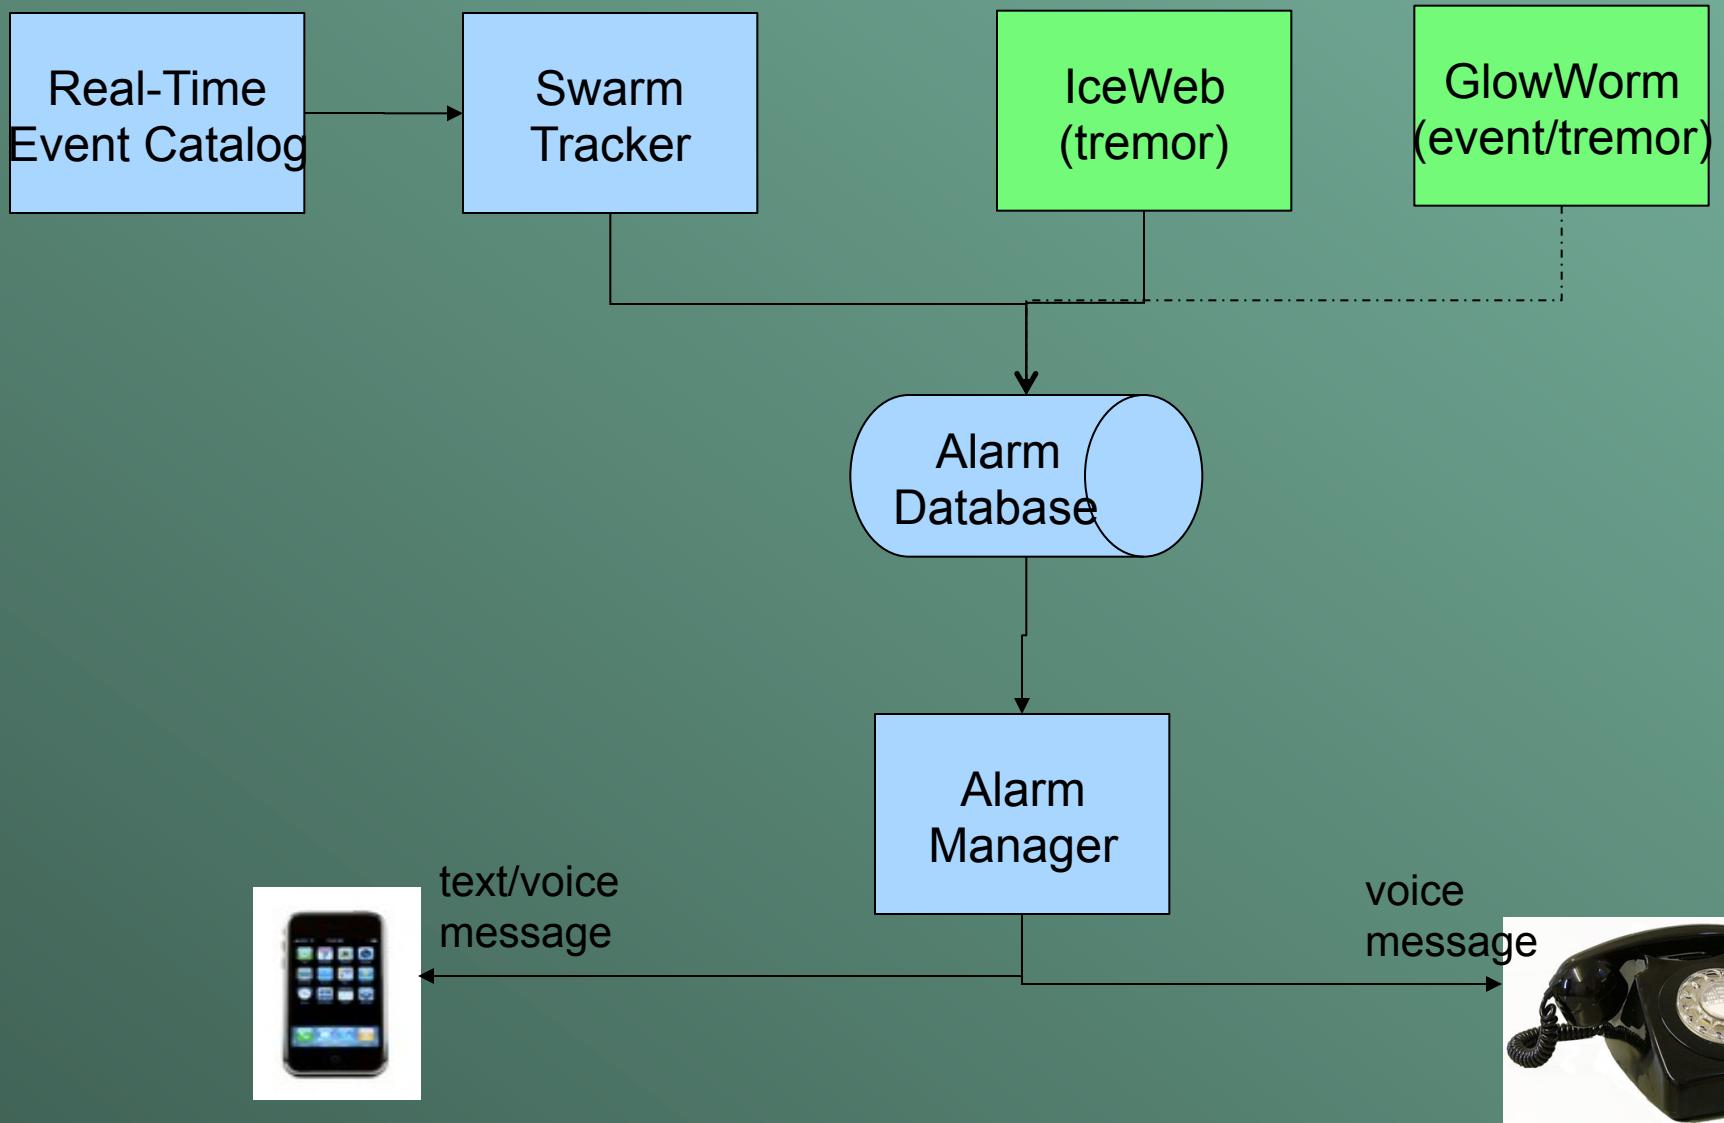

Swarms – what do we want to know?

We want to detect (significant) *changes*.

- **START** of swarm
- **END** of swarm (merge into tremor / eruption imminent or occurring ?)
- Significant **ESCALATION** (intensification) of a swarm
- **Reminder** of an ongoing swarm?

We don't care if the events are in the same place.

Real-time system

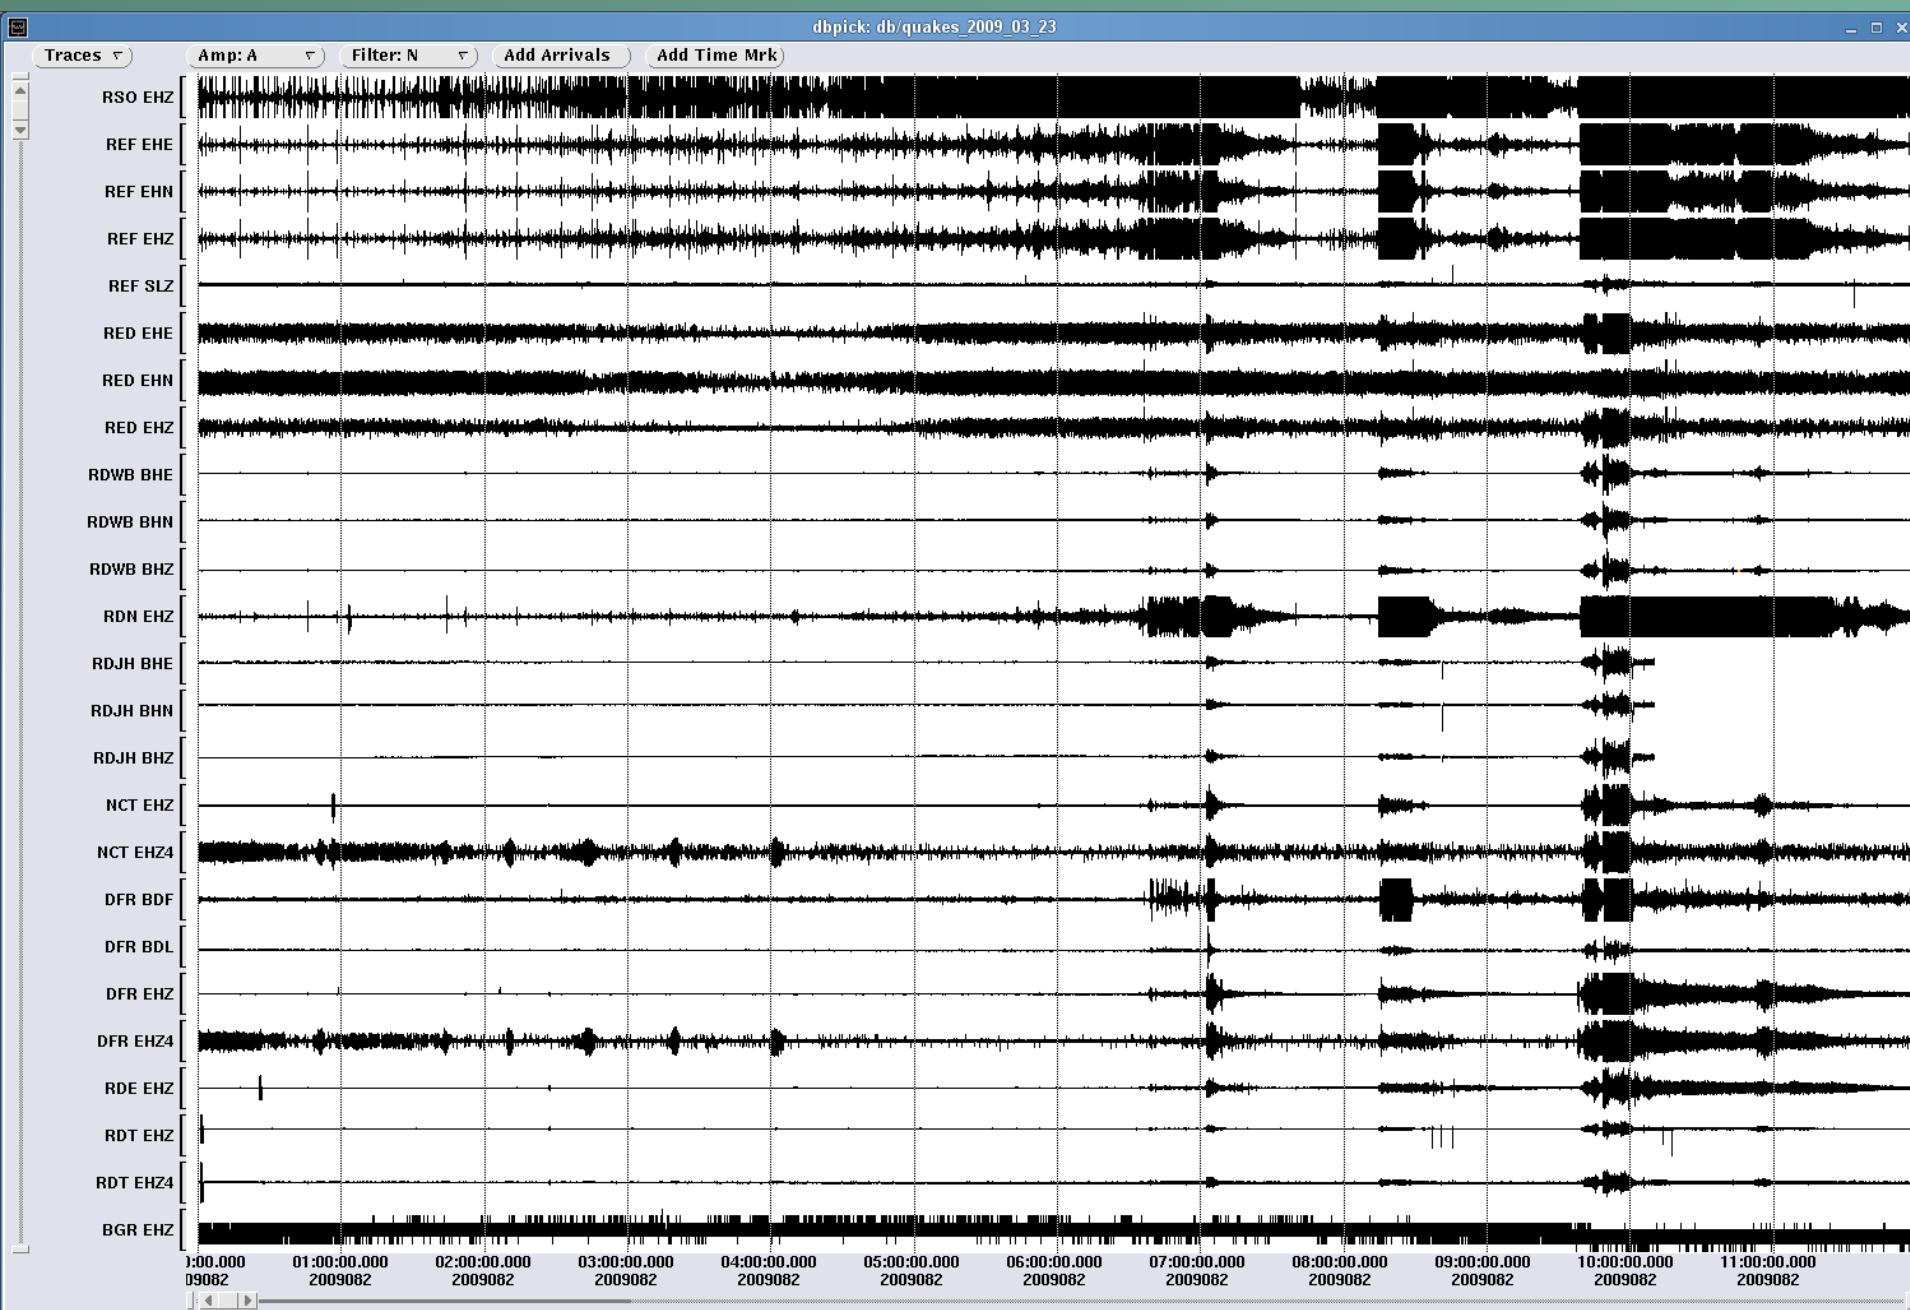

- 1. Background**
- 2. AVO Swarm alarm system**
 - Real-time catalog
 - Swarm tracking system
 - Alarm manager
- 3. Application to Redoubt 2009**
- 4. Other applications**
 - Okmok 2008
 - St Helens 2004
 - Yellowstone 2010
- 5. Conclusions**

Real-time event catalog

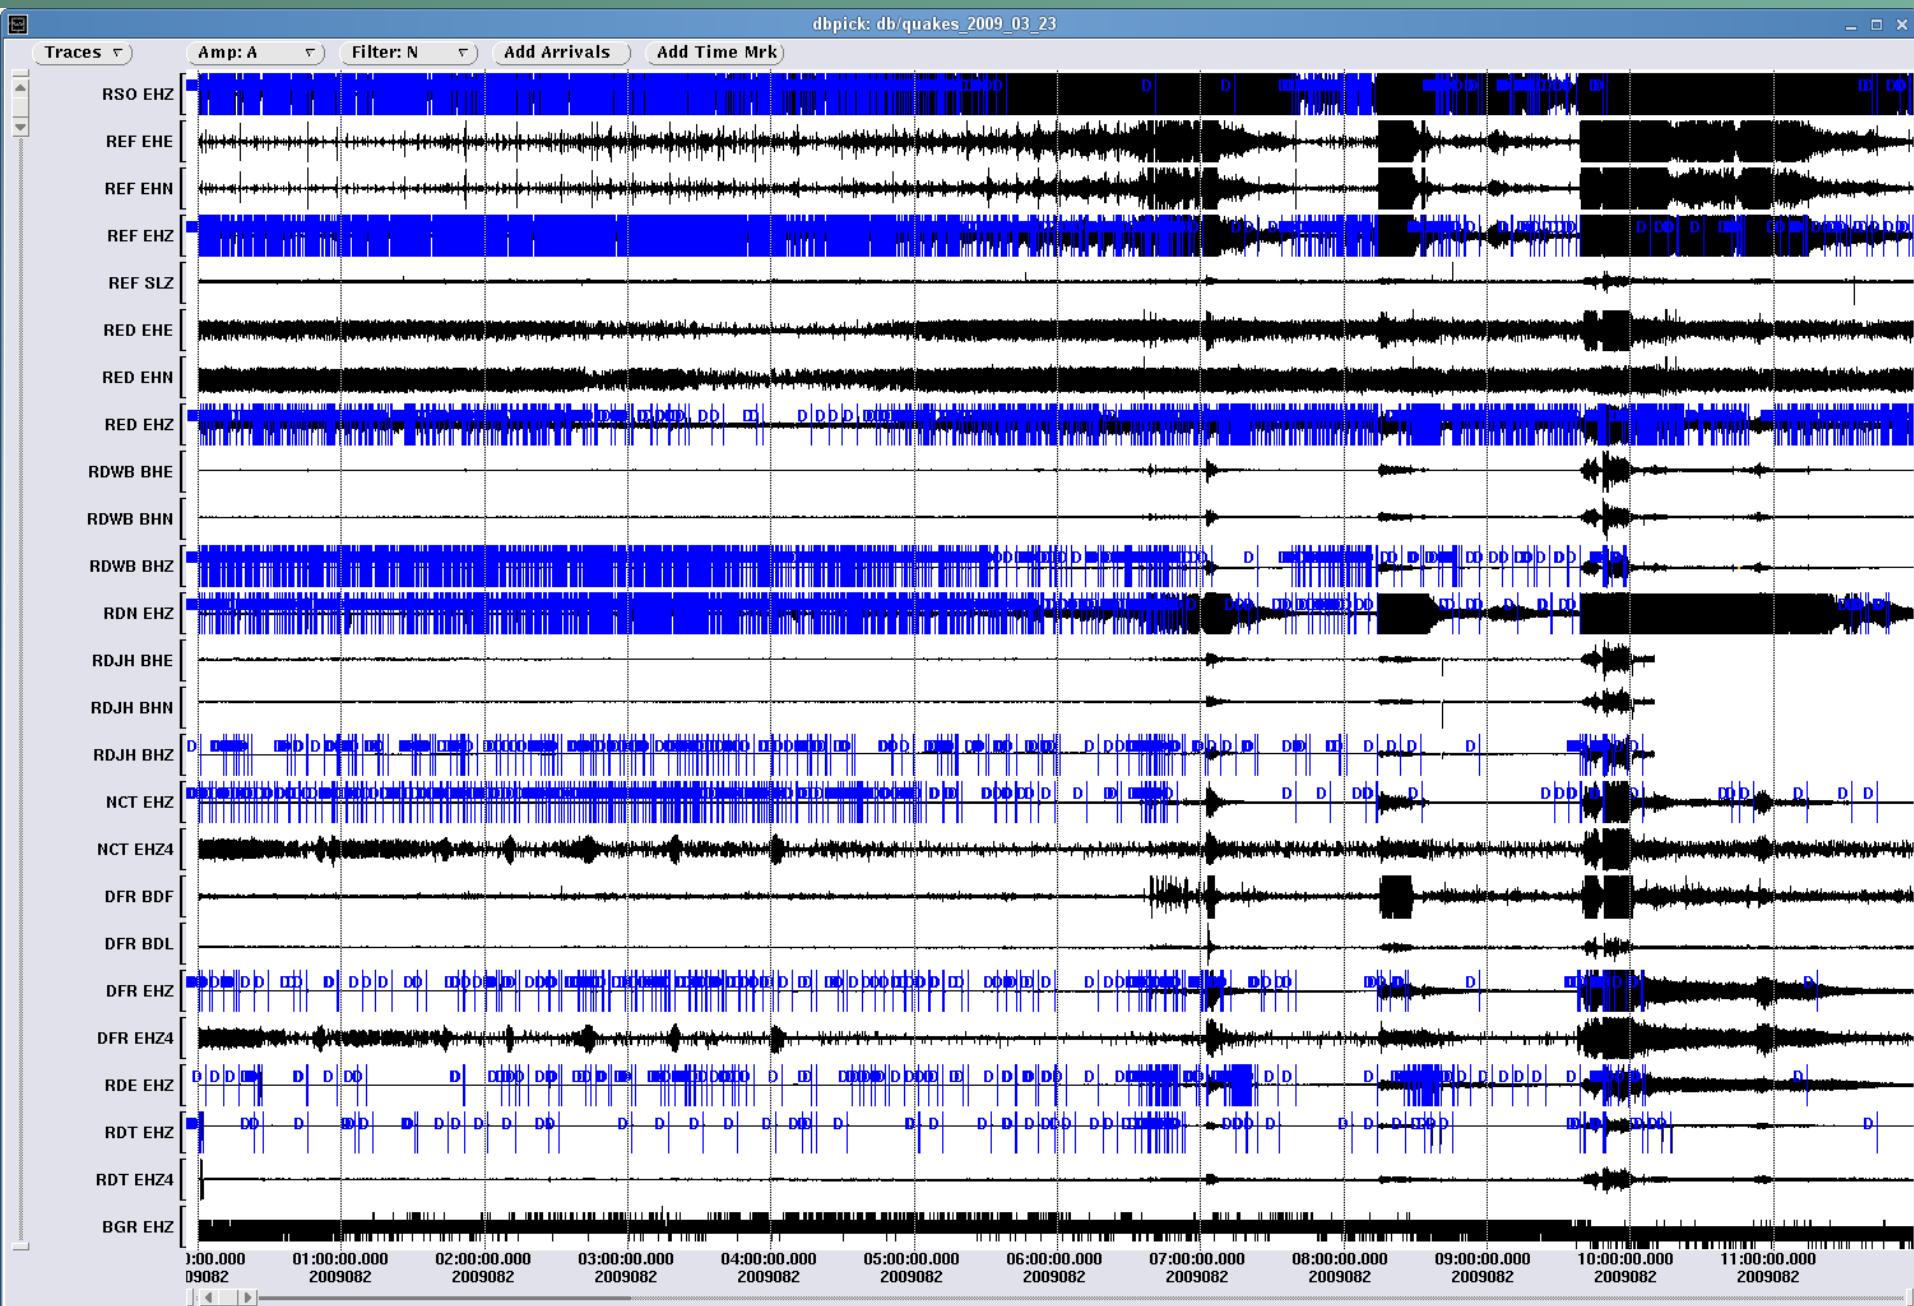

Provides:

- Event time
- magnitude
- location (which volcano)
- Quality control – minimise false alarms:
 - simultaneous detections on at least 4 stations, which locate within (say) 15 km of a volcano
 - AVO seismic data – lots of spikes/dropouts:
 - 12 bit analog telemetry
 - little solar energy for many months
 - harsh environment
 - long telemetry paths

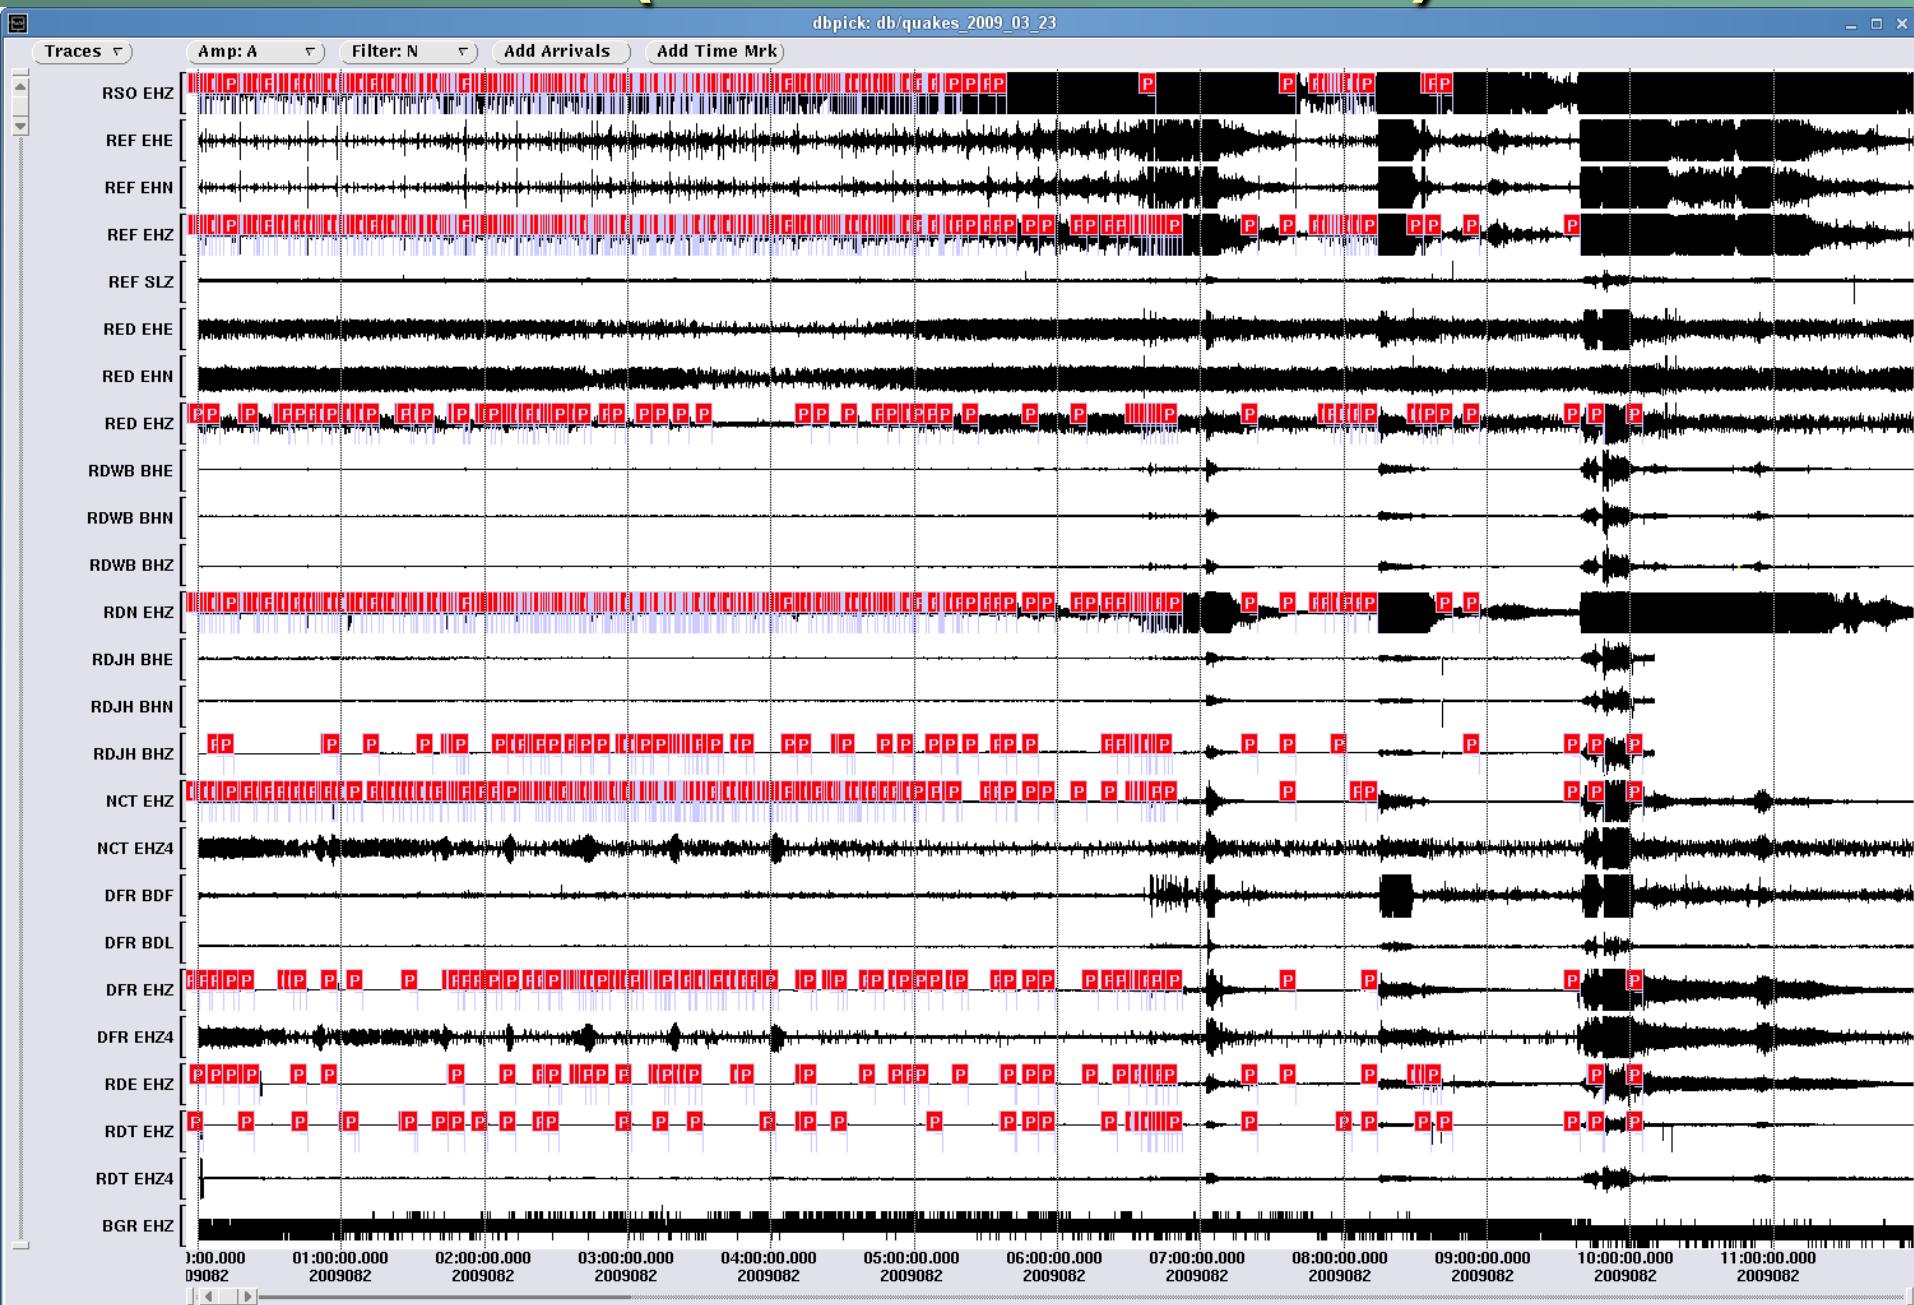

Waveform data

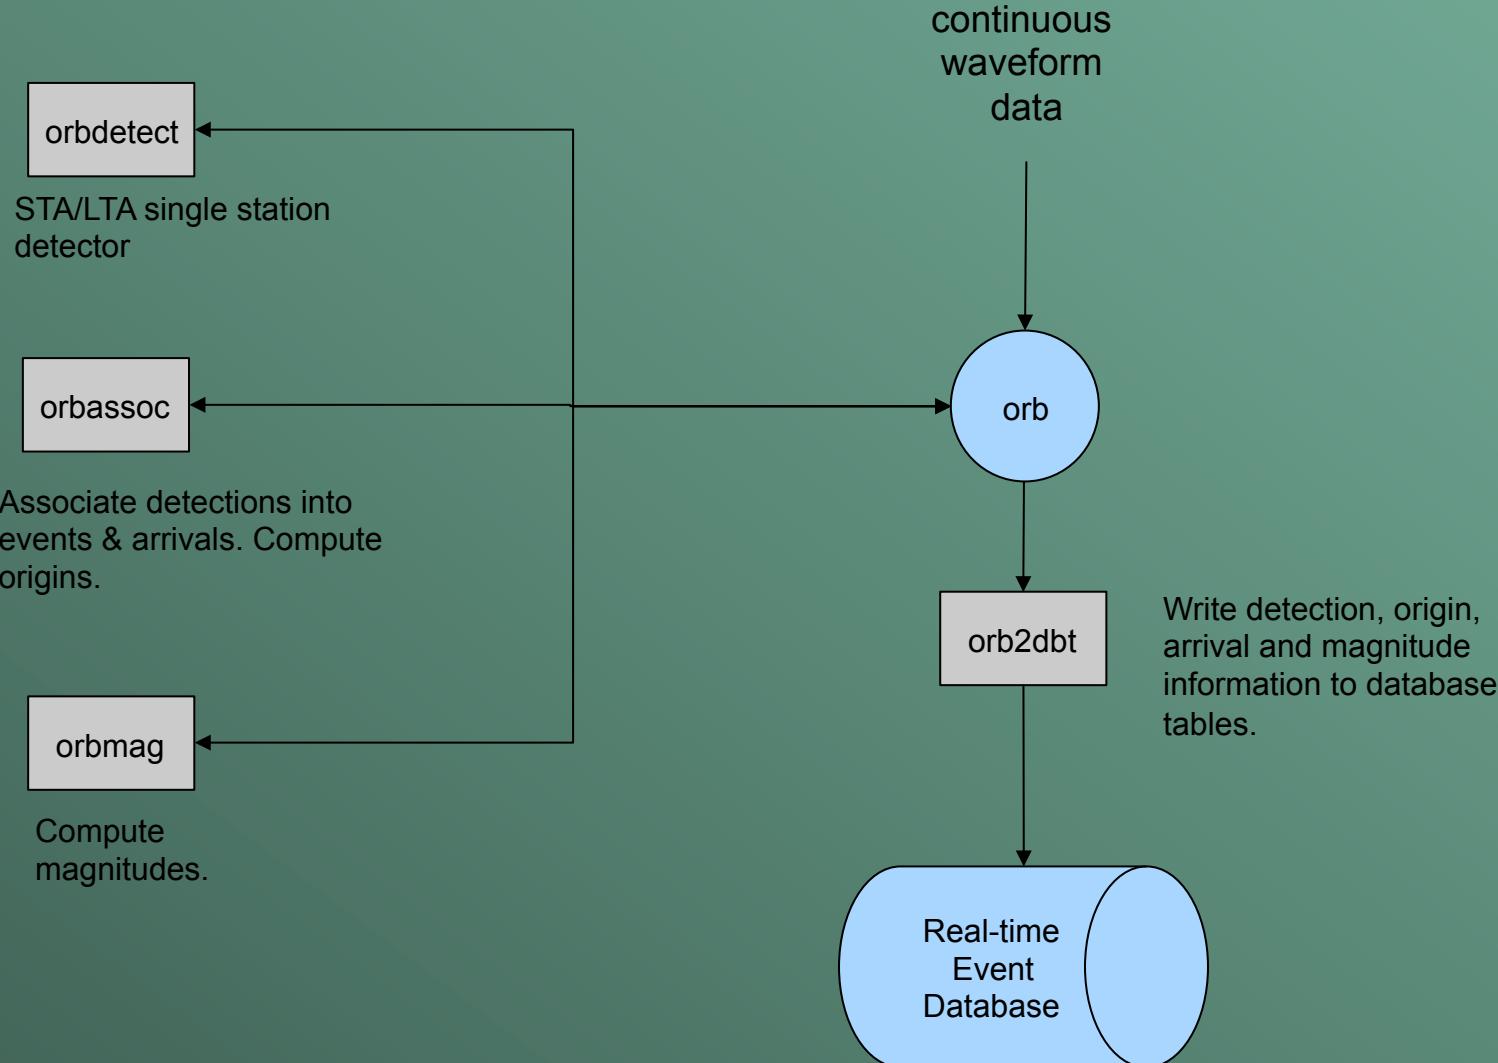

STA/LTA detector

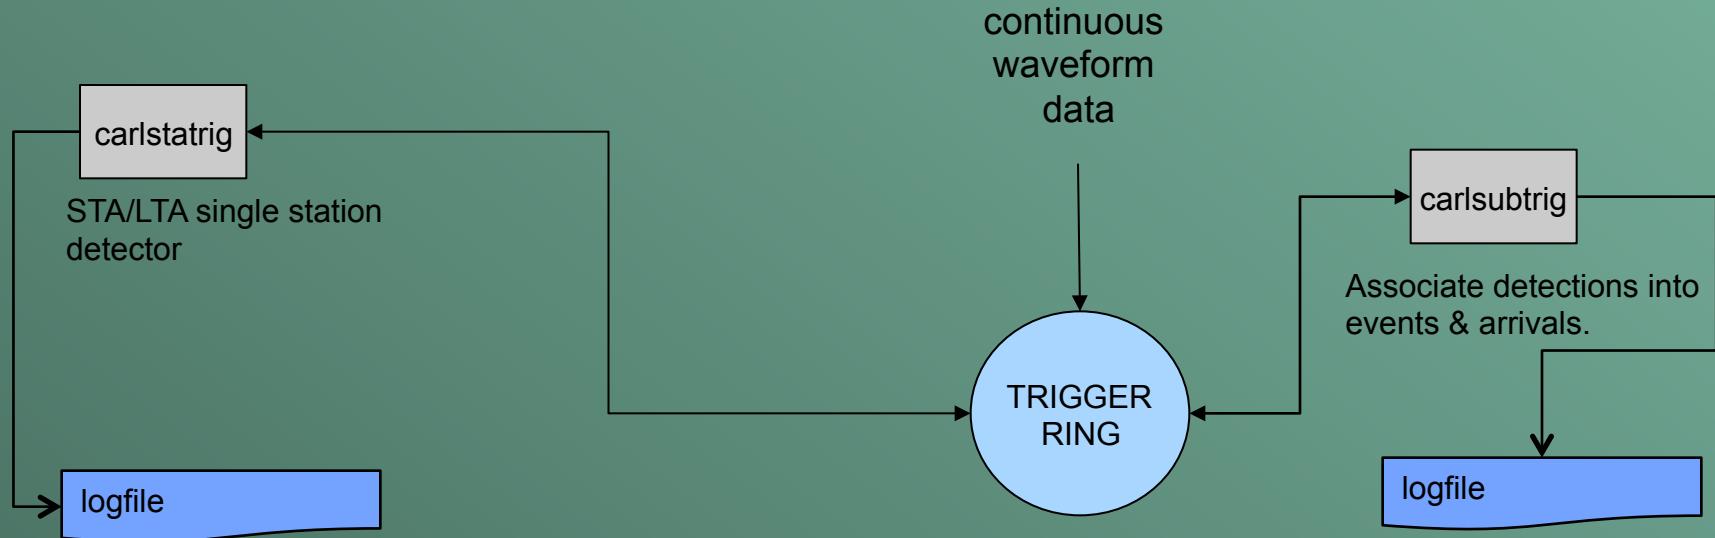

Associator (events + arrivals)

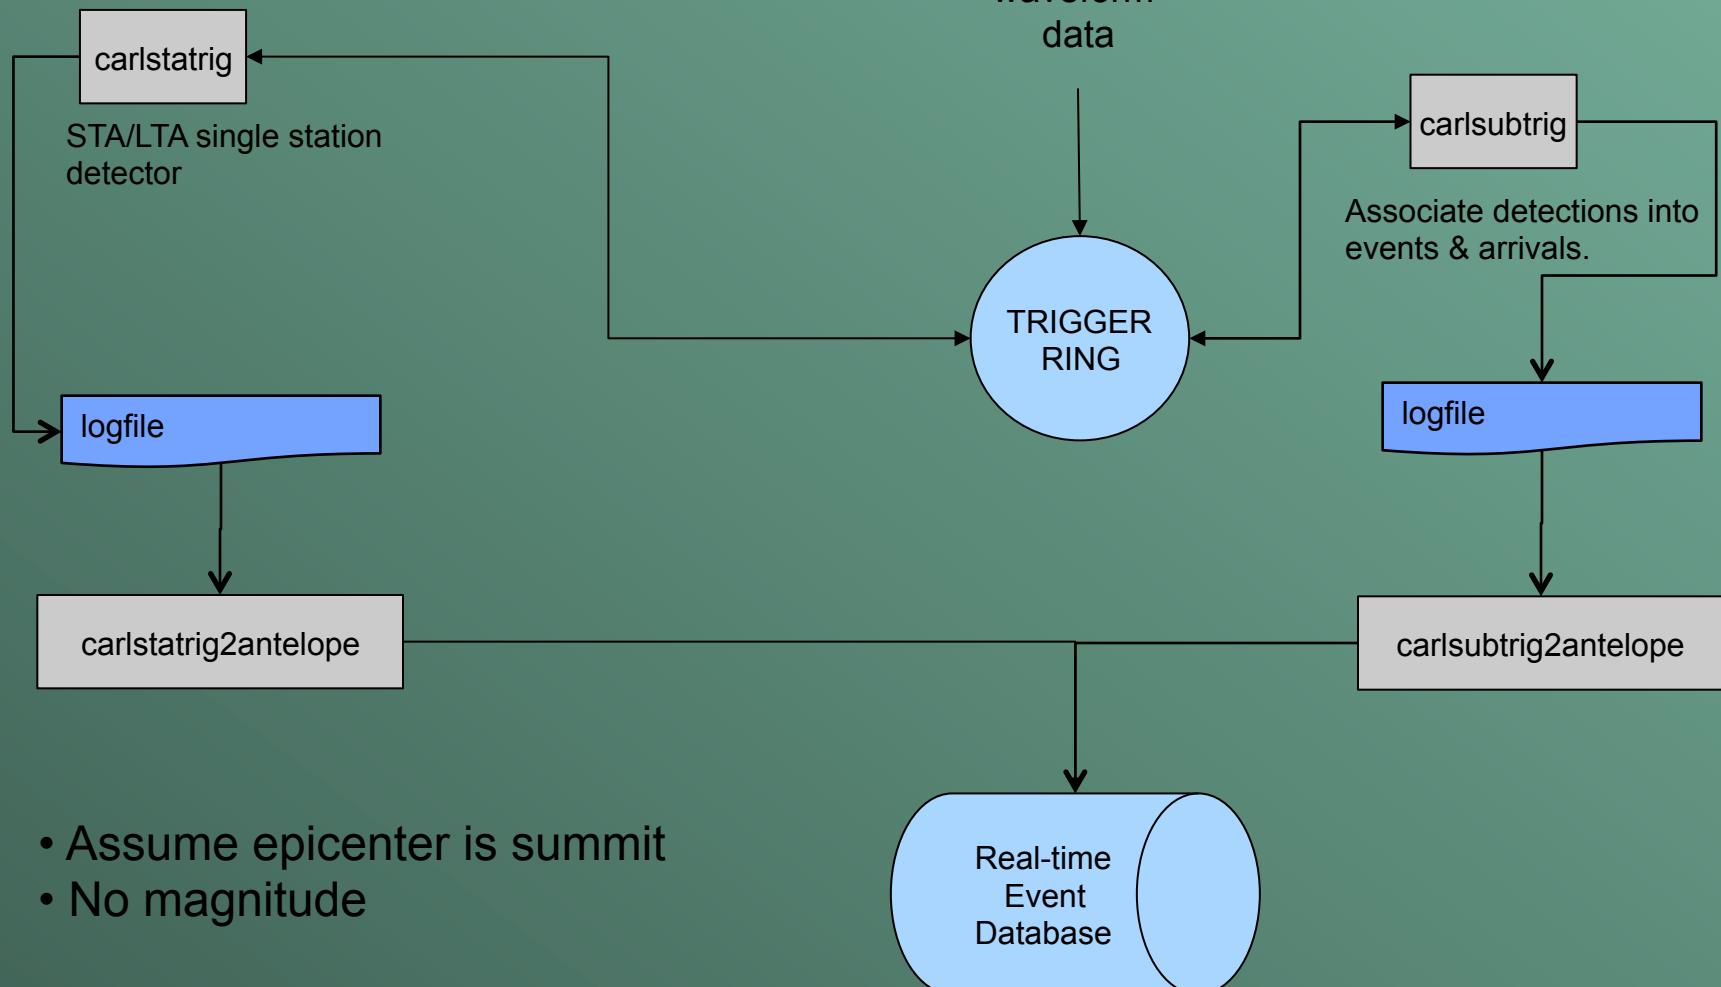

Real-time catalog: Antelope

Real-time catalog: Earthworm

Real-time catalog: Earthworm (FEAST)

- 1. Background**
- 2. AVO Swarm alarm system**
 - Real-time catalog
 - Swarm tracking system
 - Alarm manager
- 3. Application to Redoubt 2009**
- 4. Other applications**
 - Okmok 2008
 - St Helens 2004
 - Yellowstone 2010
- 5. Further work**
 - FEAST swarm alarms
 - Single station alarms?
 - Generic alarm algorithm?

Swarm tracking system: Metrics

Every 5 minutes, read the last 60 minutes of the event catalog & compute:

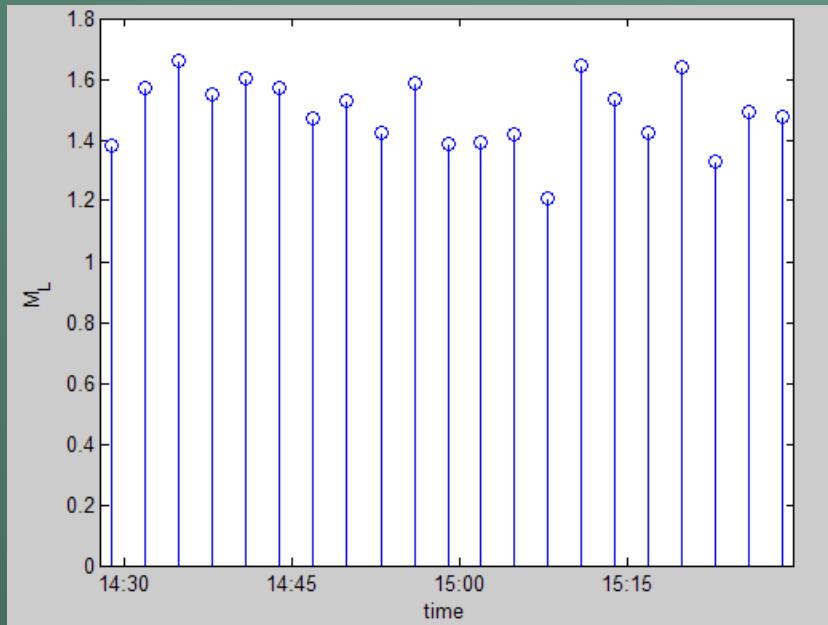

- mean event rate
- median event rate (reciprocal of median event interval)
- mean magnitude
- cumulative magnitude

$$\log_{10}(\text{Energy}) = 1.5 M_L + 4.7$$

Energy release rate

Swarm tracking system: Metrics

20 events in 1 hour, 3 minutes apart
 M_L 1.5 +/- 0.3

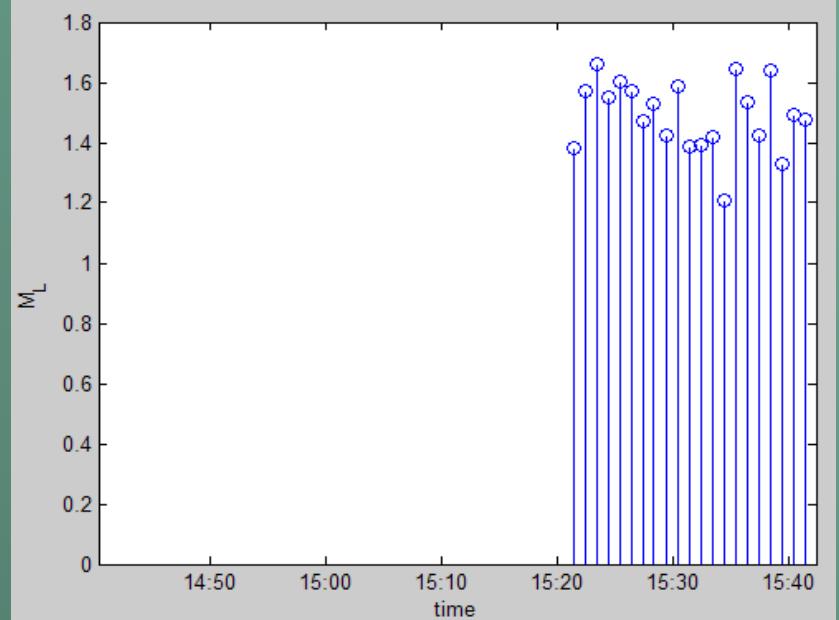

Mean rate = 20

Median rate = 20

Mean M_L = 1.5

Cumulative M_L = 2.4

20 events in 1 hour, 1 minute apart
 M_L 1.5 +/- 0.3

Mean rate = 20

Median rate = 60

Mean M_L = 1.5

Cumulative M_L = 2.4

Swarm tracking system: Parameters

- Timewindow
- Thresholds for swarm start, escalation and end in terms of:
 - Mean rate
 - *Median rate (optional)*
 - *Mean magnitude (optional)*
 - *Cumulative magnitude (optional)*
- Reminder time

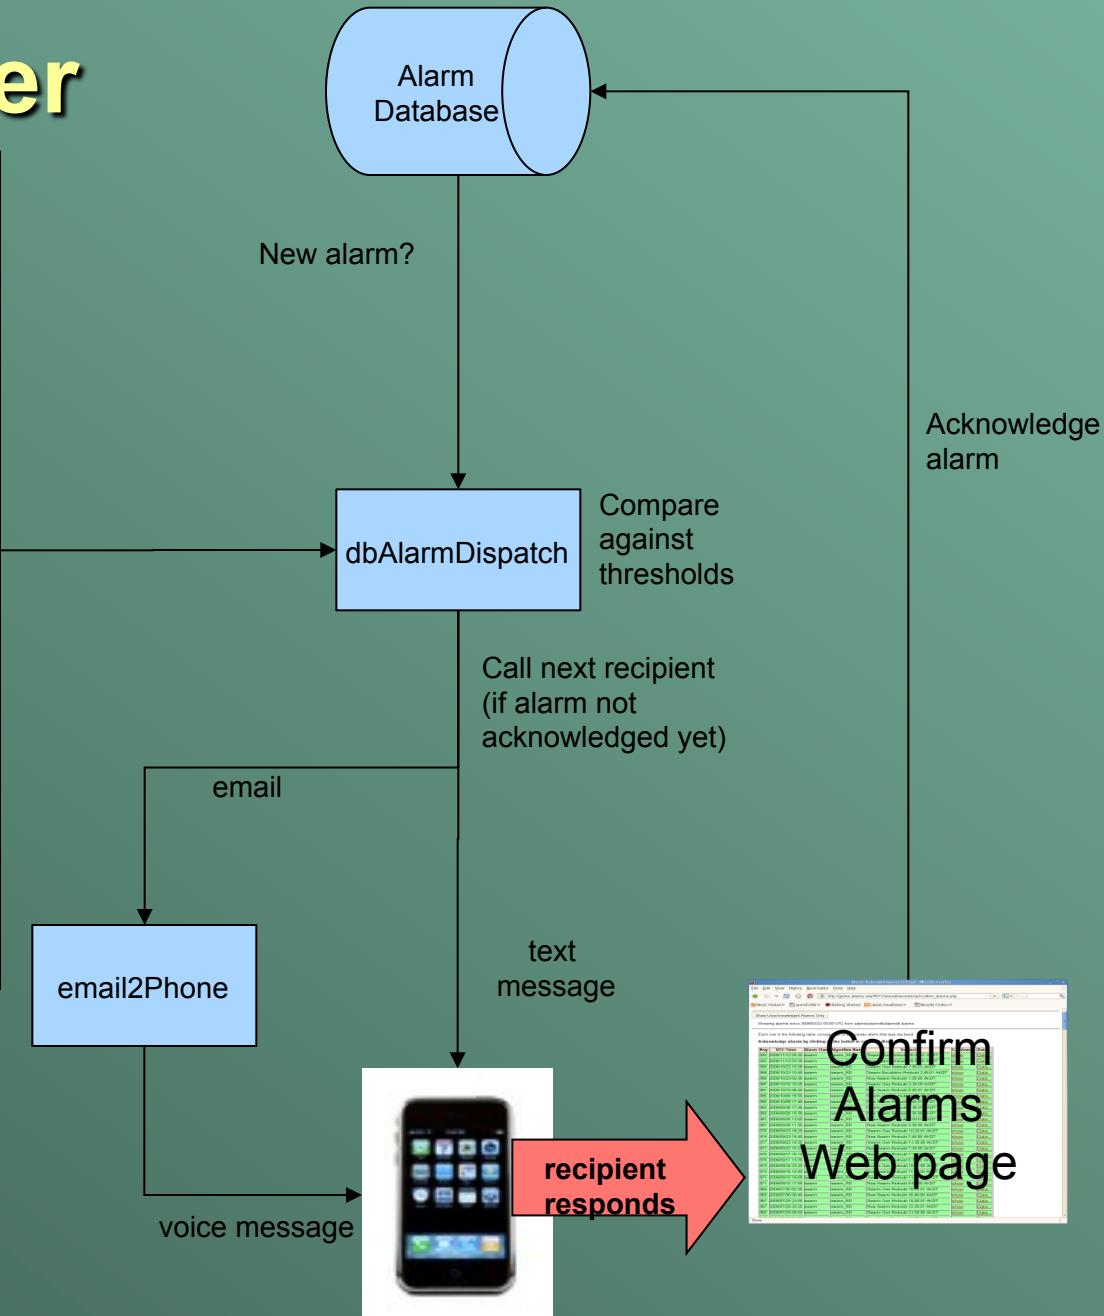

Alarm type	Mean rate	Median rate	Mean ML	Cumulative ML
start	16	32	1.0	1.2
end	8	16	0.8	1.0
Escalation 1	32	64	1.2	1.4
Escalation 2	64	128	1.4	1.6

- 1. Background**
- 2. AVO Swarm alarm system**
 - Real-time catalog
 - Swarm tracking system
 - Alarm manager
- 3. Application to Redoubt 2009**
- 4. Other applications**
 - Okmok 2008
 - St Helens 2004
 - Yellowstone 2010
- 5. Conclusions**

}
```

Parameter file for dbAlarmDispatch

Alarm Manager

- Generic (independent)
- Can handle alarms of any type (swarm, tremor, diagnostic, GPS, remote sensing...)
- Multiple recipients (cellphones)
- Progressive calldown
- First recipient – Duty Seismologist – changes weekly
- Any recipient can acknowledge alarm on a web page
- Once acknowledged, calldown is cancelled
- Information is logged
- Calls to landlines possible through 3rd party services

Progressive Calldown

```

Swarm alarms

Progressive
calldown

A typical swarm alarm message. Includes a hyperlink to the alarm confirmation webpage. Also includes metadata, such as event rates and magnitudes.

Subject: 'Swarm Over Redoubt 22:13:00 AKDT'

2009/03/23 6:13:00 UTC

Span: 60 minutes

Evts: 14 (14 located)

Mean Rate: 13/hr

Median Rate: 17/hr

Mags: 0.2/0.9/1.6 (of 13)

Cum MI: 1.9

RDN(12) REF(11) NCT(10) RSO(7) DFR(6) RDJH(6) RED(4) RDWB(0)

Redoubt 2009: event catalog

Redoubt 2009: Swarm tracking parameters

Timewindow = 60 minutes

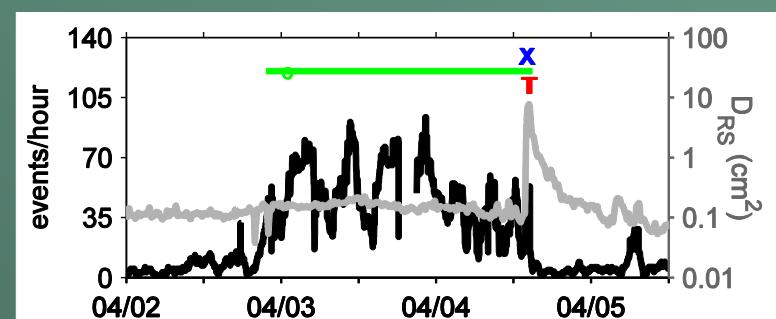

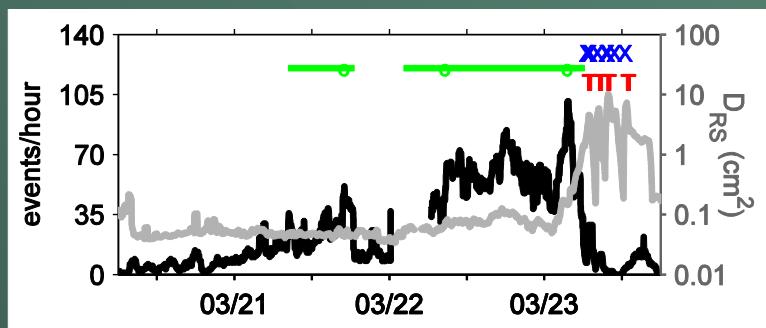

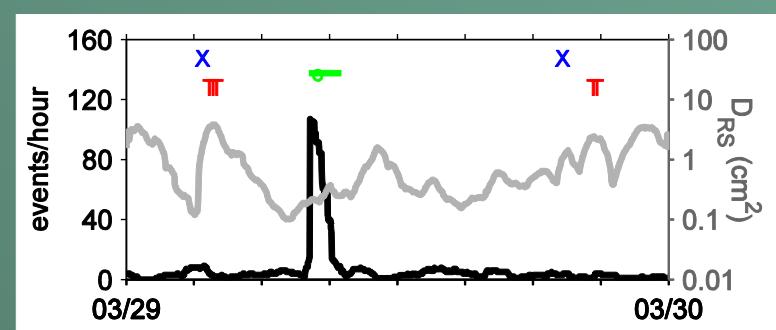

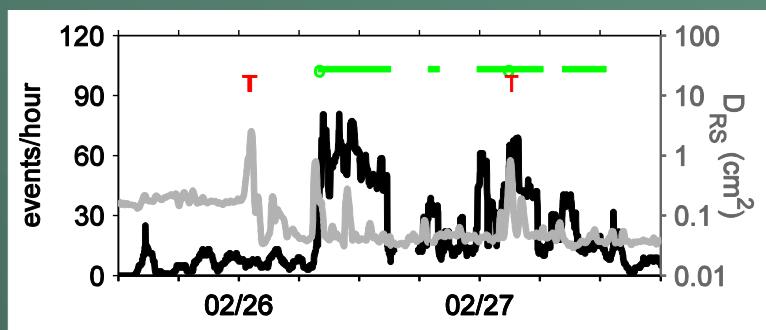

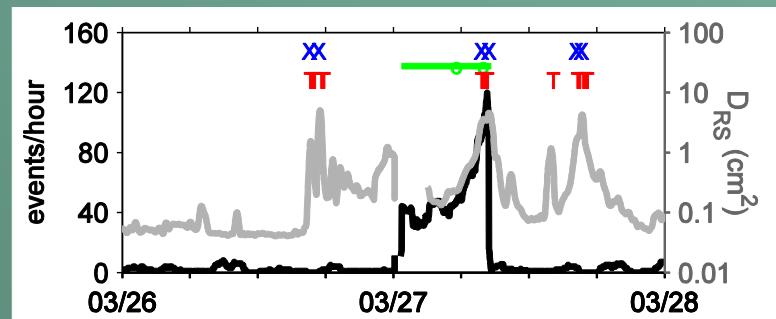

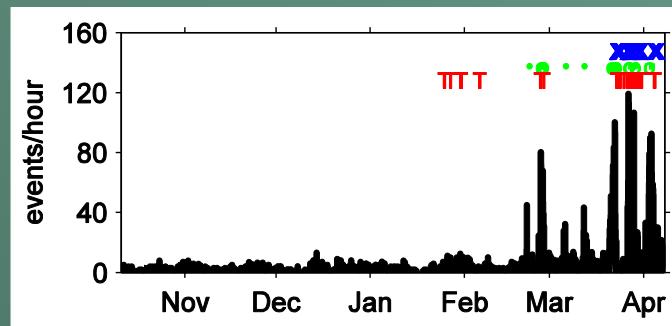

Reminder time = 99999 minutes (none)

Alarm type	Mean rate	Median rate	Mean ML	Cumulative ML
start	16	32		
end	11	22		
Escalation 1	24	48		
Escalation 2	36	72		

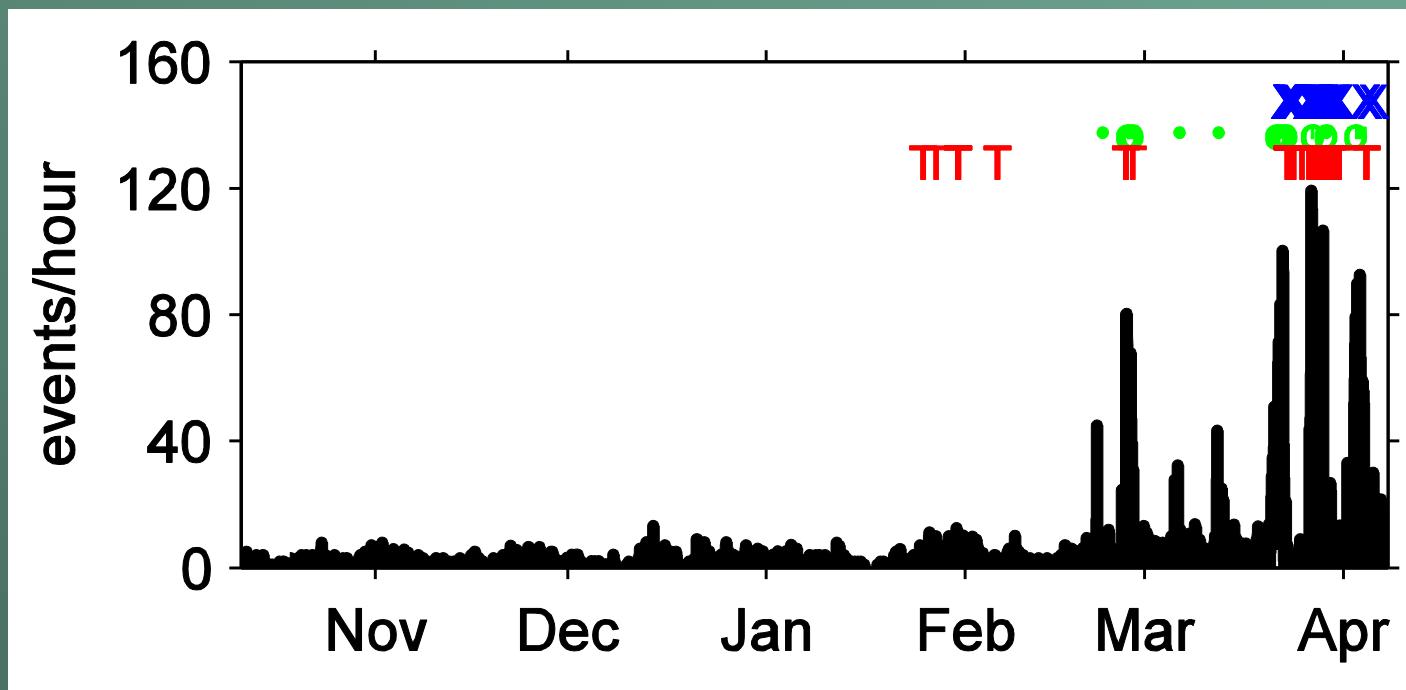

Redoubt 2009: Swarm episodes

swarm	# events	Cumulative ML
25-28 Feb	815	3.3
19-25 Mar	1,793	3.7
26-29 Mar	410, 103	3.2
1-6 Apr	1,609	3.9

Redoubt 2009: swarms & tremor

Redoubt: Oct 2008 – Apr 2009

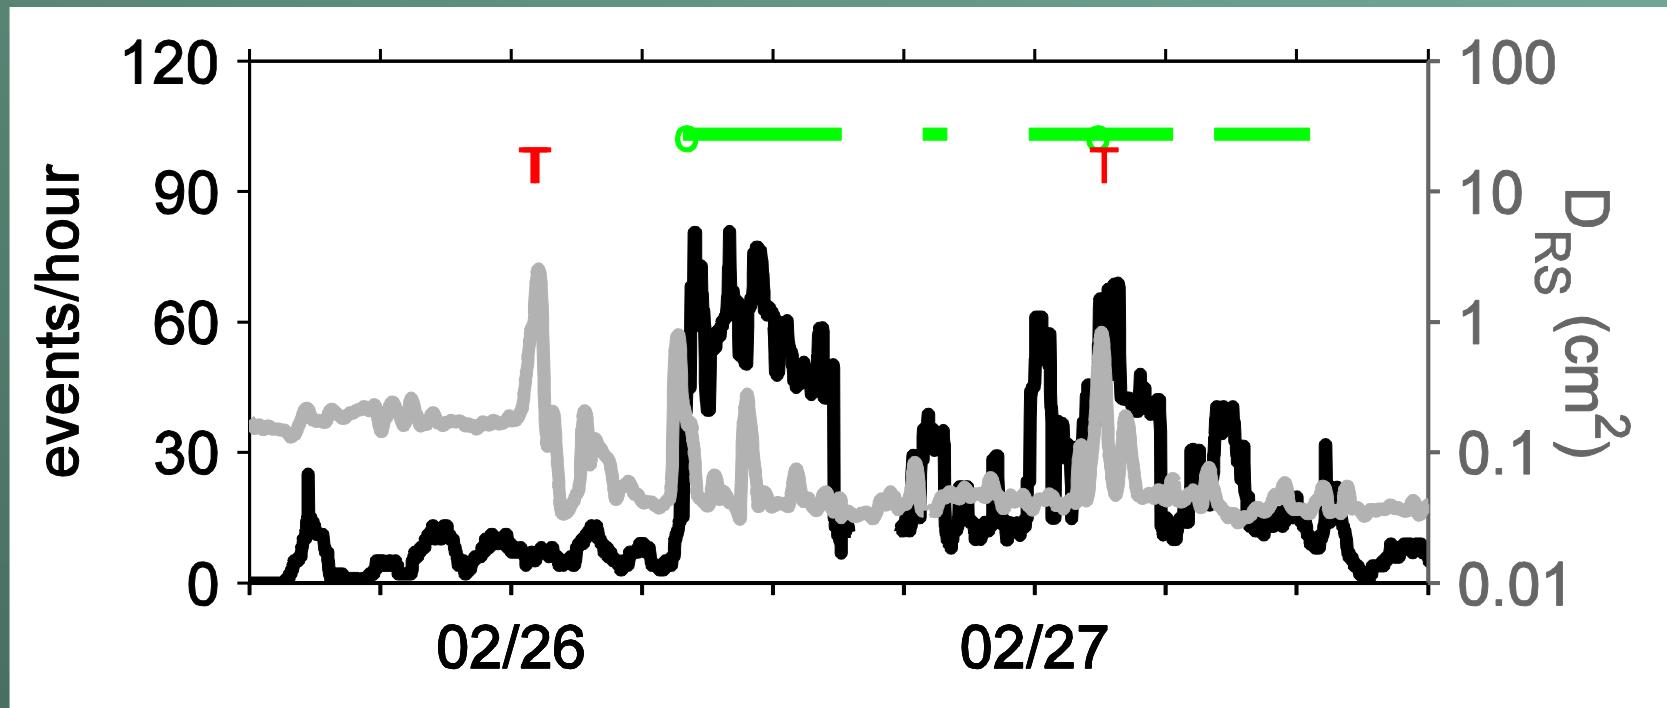

X Explosive eruption (ash > 5 km)
T Tremor alarm

— Hourly event rate, from the real-time event catalog
— Reduced displacement (like RSAM, but corrected for instrument response and geometrical spreading) on station REF

Redoubt: 26-27 Feb 2009

X Explosive eruption (ash > 5 km)

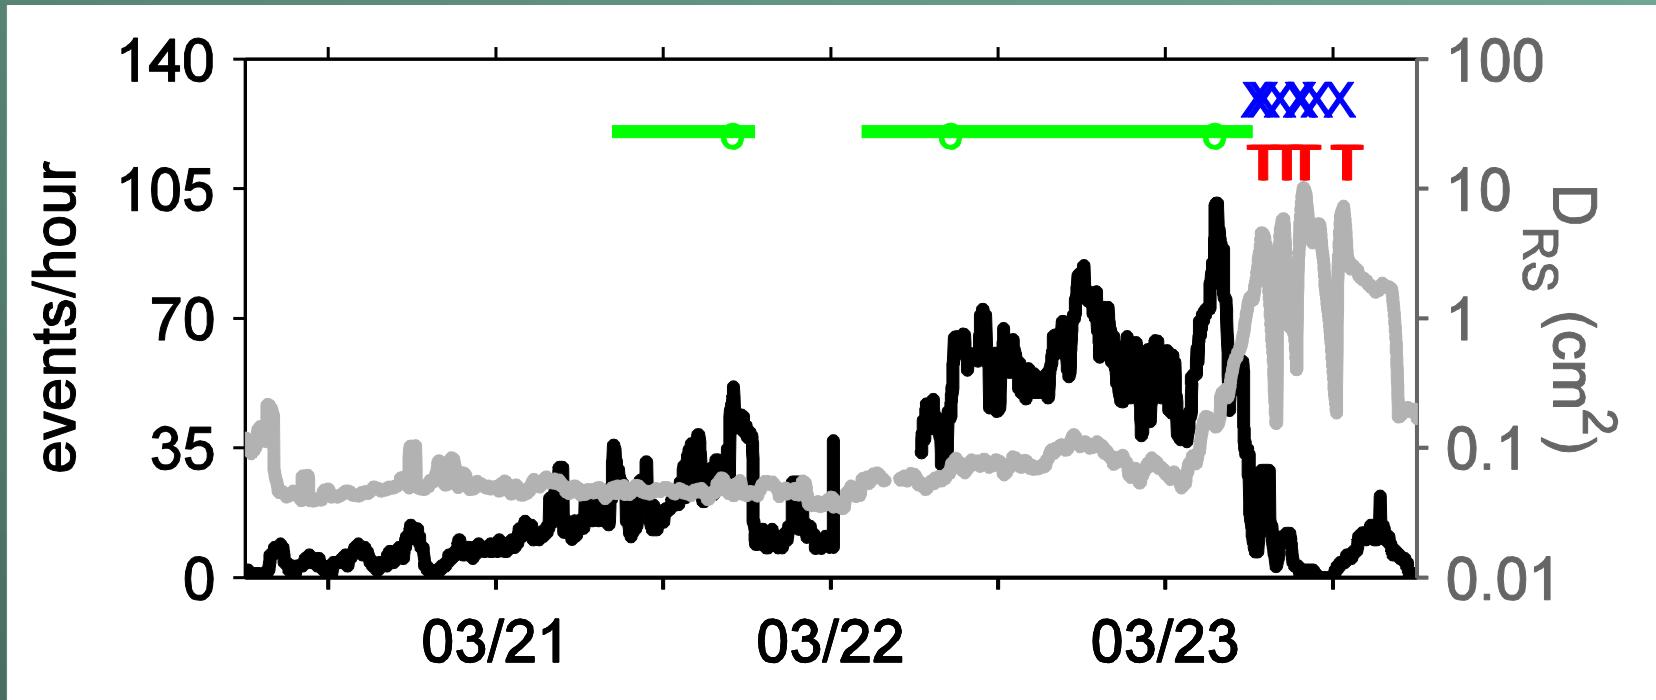

T Tremor alarm

— Hourly event rate, from the real-time event catalog

— Reduced displacement (like RSAM, but corrected for instrument response and geometrical spreading) on station REF

Redoubt: 21-23 Mar 2009

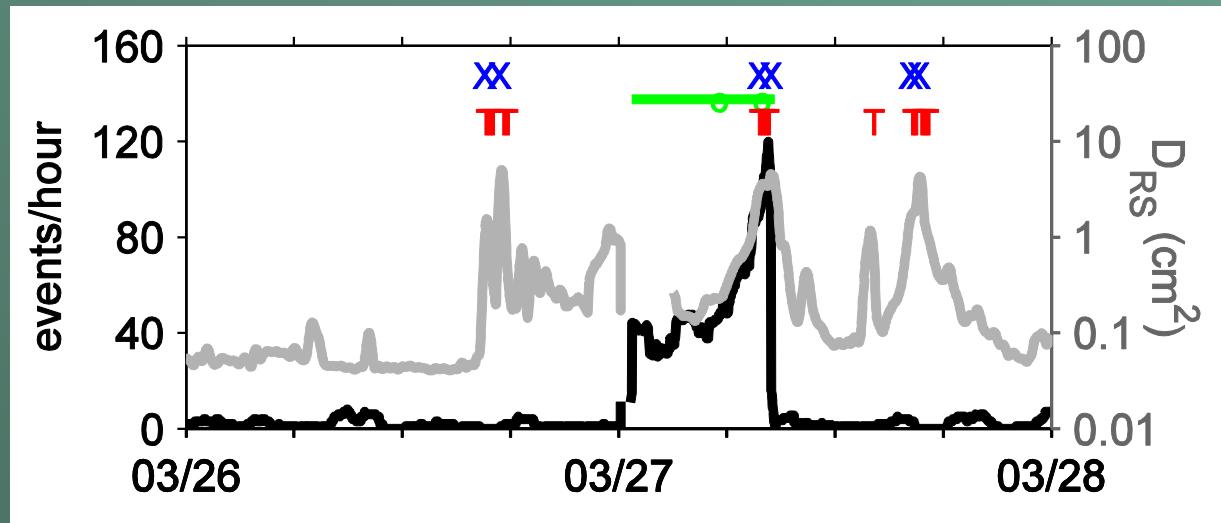

X Explosive eruption (ash > 5 km)
T Tremor alarm

swarm start alarm swarm escalation alarm swarm end alarm

— Hourly event rate, from the real-time event catalog

— Reduced displacement (like RSAM, but corrected for instrument response and geometrical spreading) on station REF

Redoubt: 27 & 29 Mar 2009

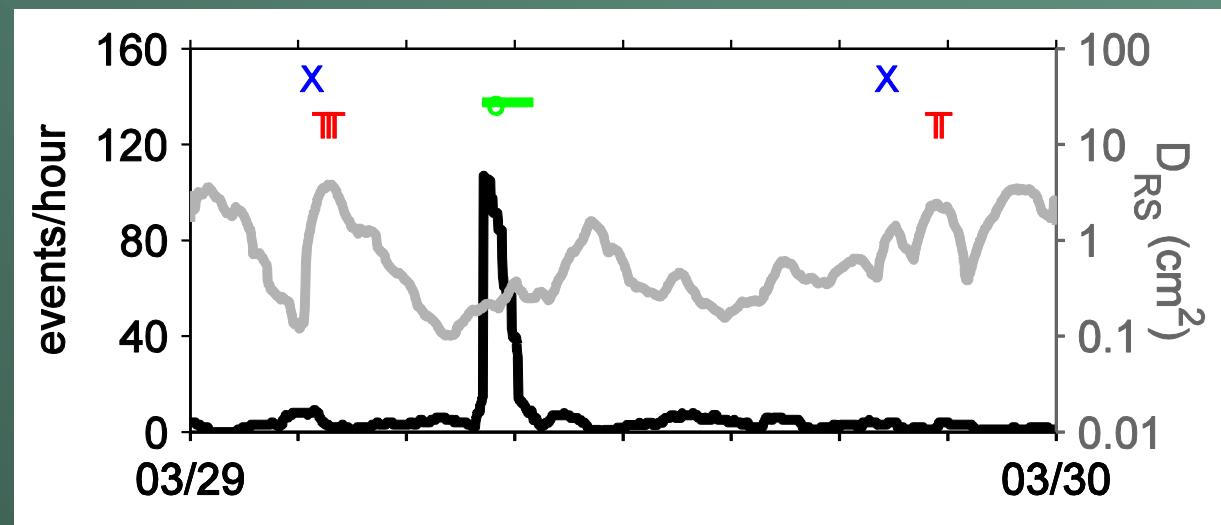

X Explosive eruption (ash > 5 km)
T Tremor alarm

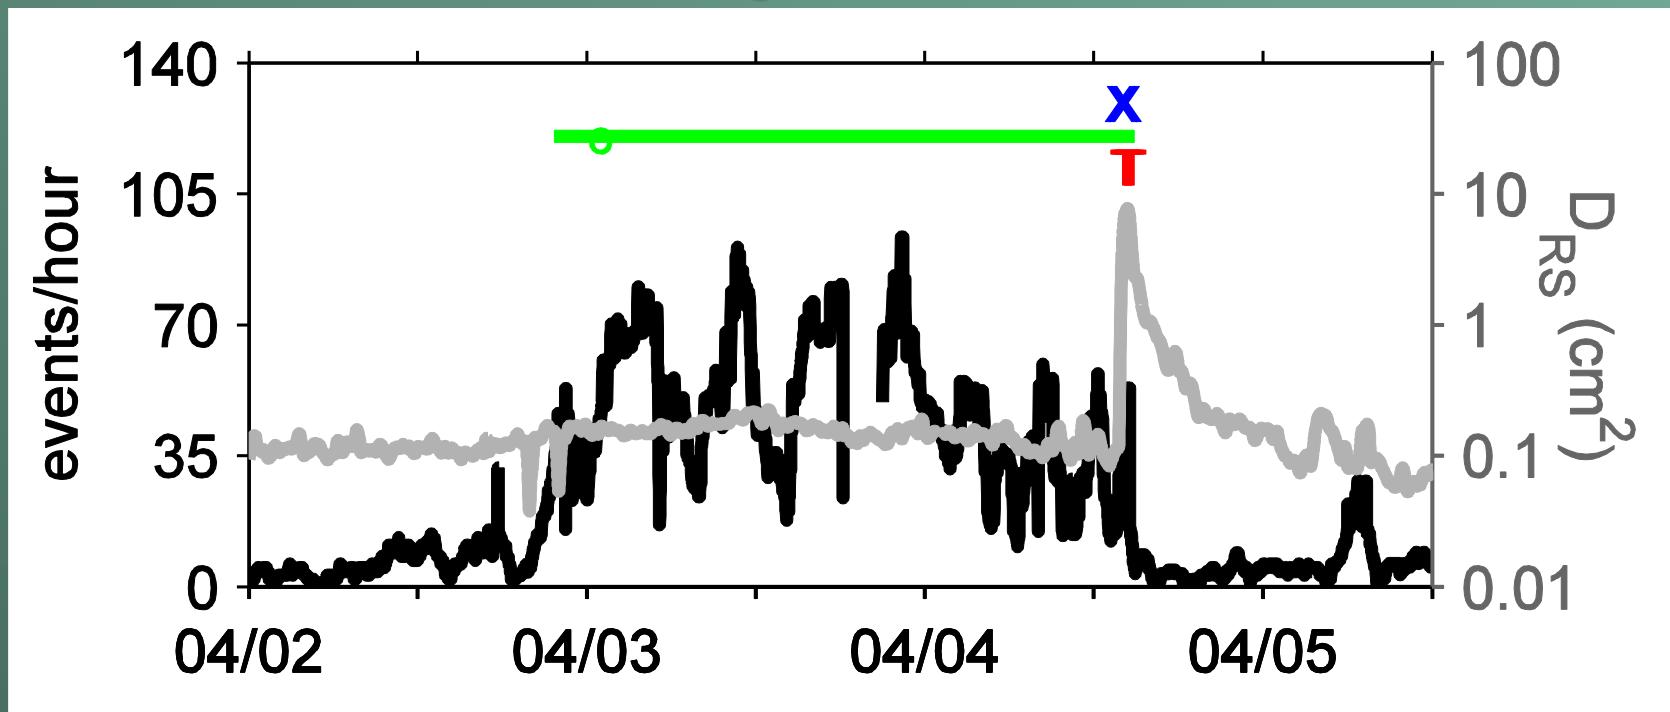

swarm start alarm swarm escalation alarm swarm end alarm

Hourly event rate, from the real-time event catalog

Reduced displacement (like RSAM, but corrected for instrument response and geometrical spreading) on station REF

Redoubt: 2-4 Apr 2009

X Explosive eruption (ash > 5 km)

T Tremor alarm

— Hourly event rate, from the real-time event catalog

— Reduced displacement (like RSAM, but corrected for instrument response and geometrical spreading) on station REF

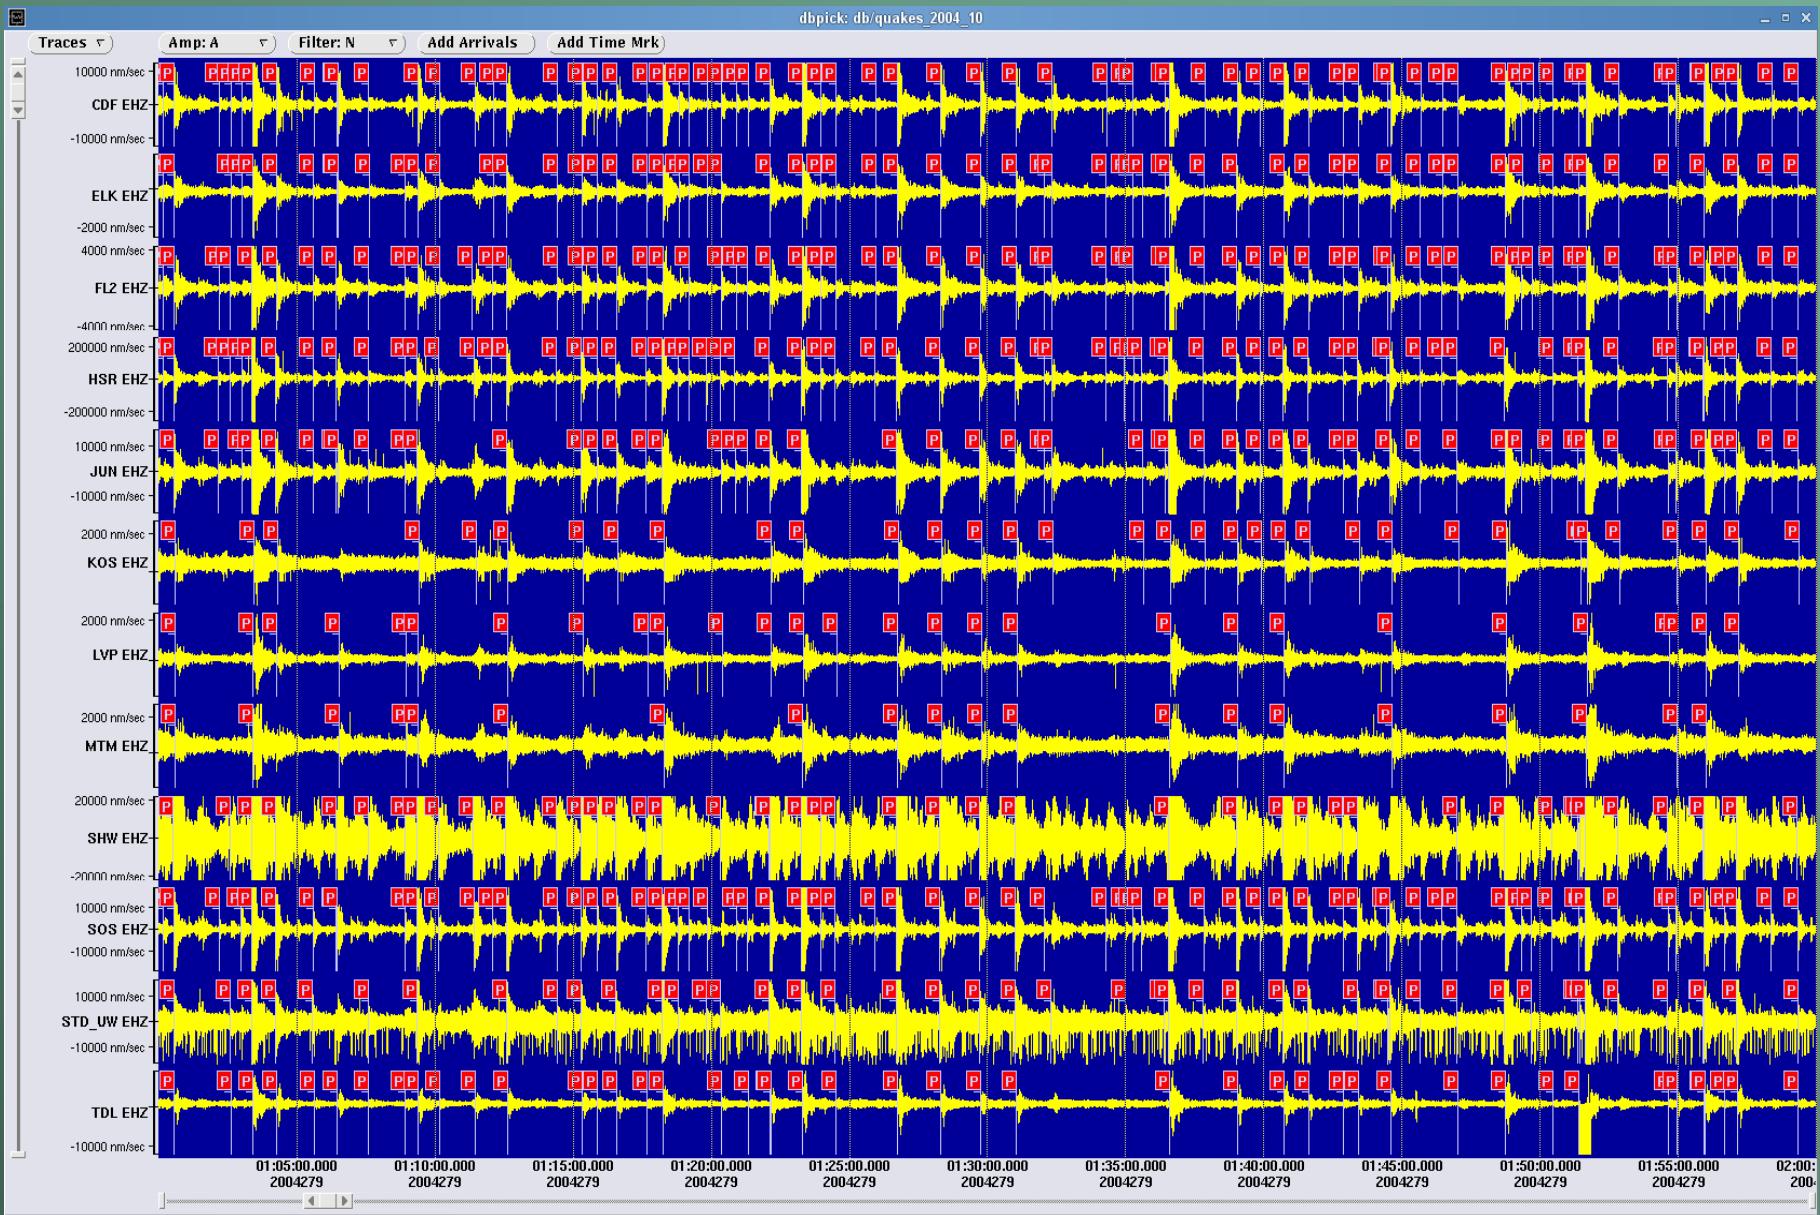

Swarm Alarm system

- Five swarm episodes were detected: 26-27 Feb, 21-23 Mar, 27 Mar, 29 Mar and 2-4 April.
- No false alarms (no garbage in event database caused by telemetry noise)

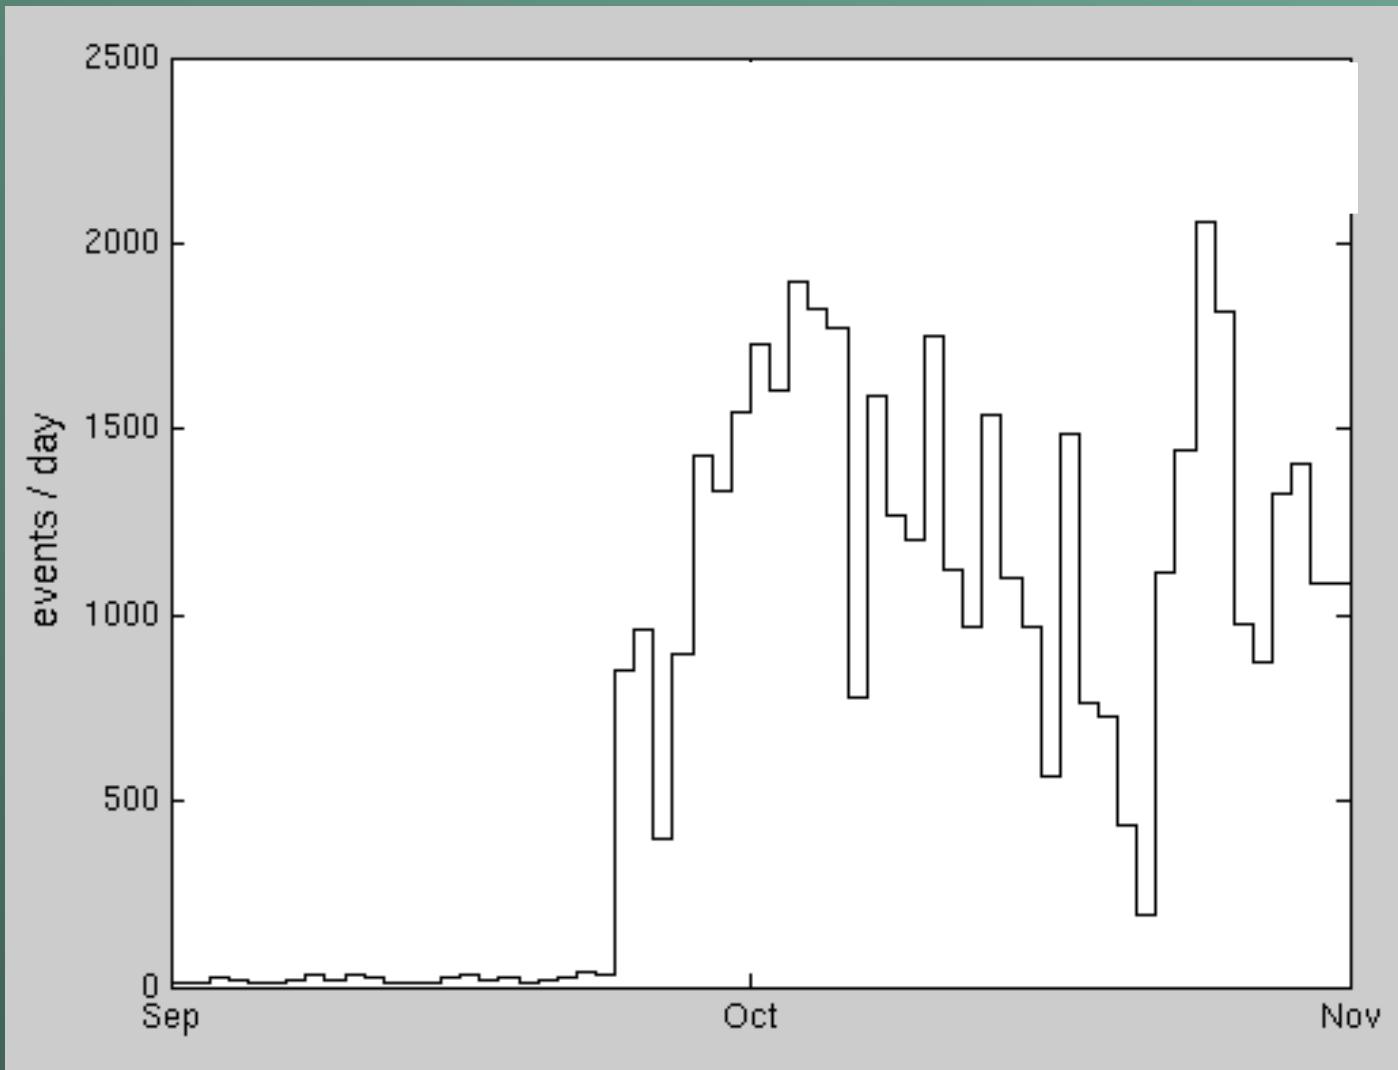

Tremor Alarm system

- Detected initial escalation in seismicity on 25 January
- Detected most of 31 explosive eruptions (based on infrasonic data)

St Helens 2004 swarms

St Helens 2004: daily event counts

St Helens 2004: Swarm tracking parameters

Timewindow = 60 minutes

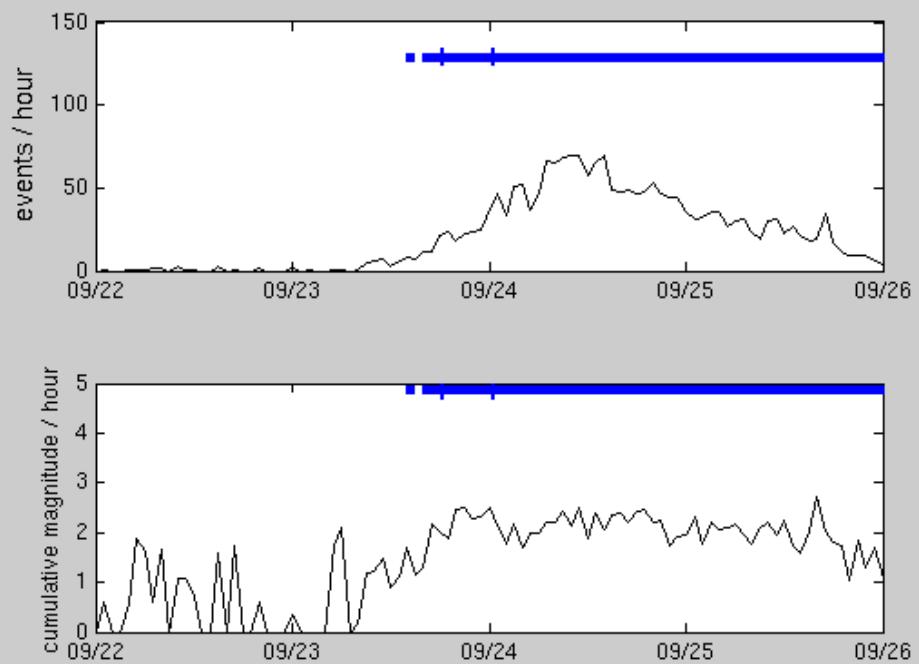

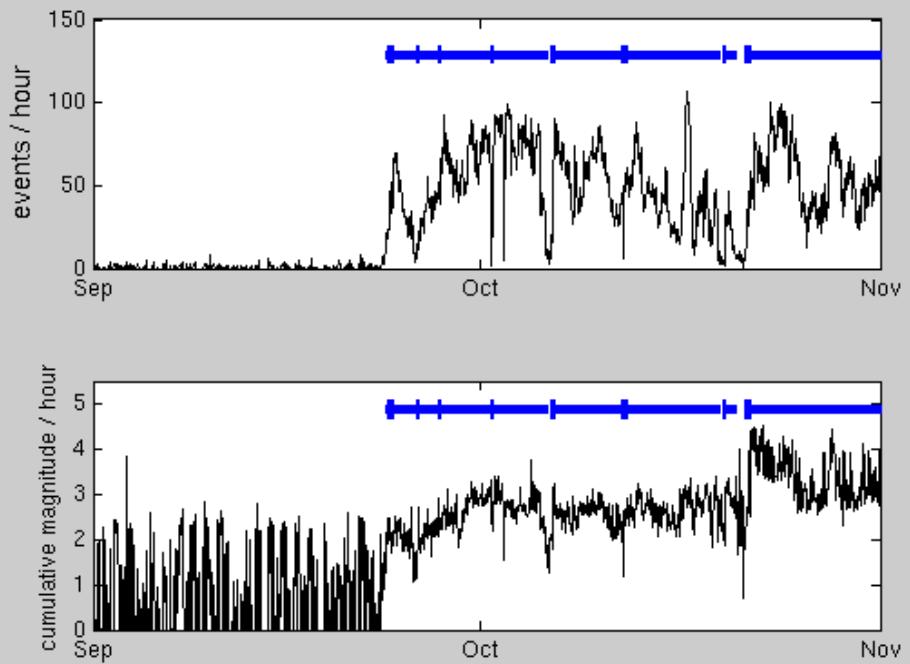

Reminder time = 99999 minutes (none)

Alarm type	Mean rate	Median rate	Mean ML	Cumulative ML
start	10			
end	5			
Escalation 1	20			
Escalation 2	40			

St Helens 2004

5 swarms

First alarm at 13:50 UT on 23-Sep-2004

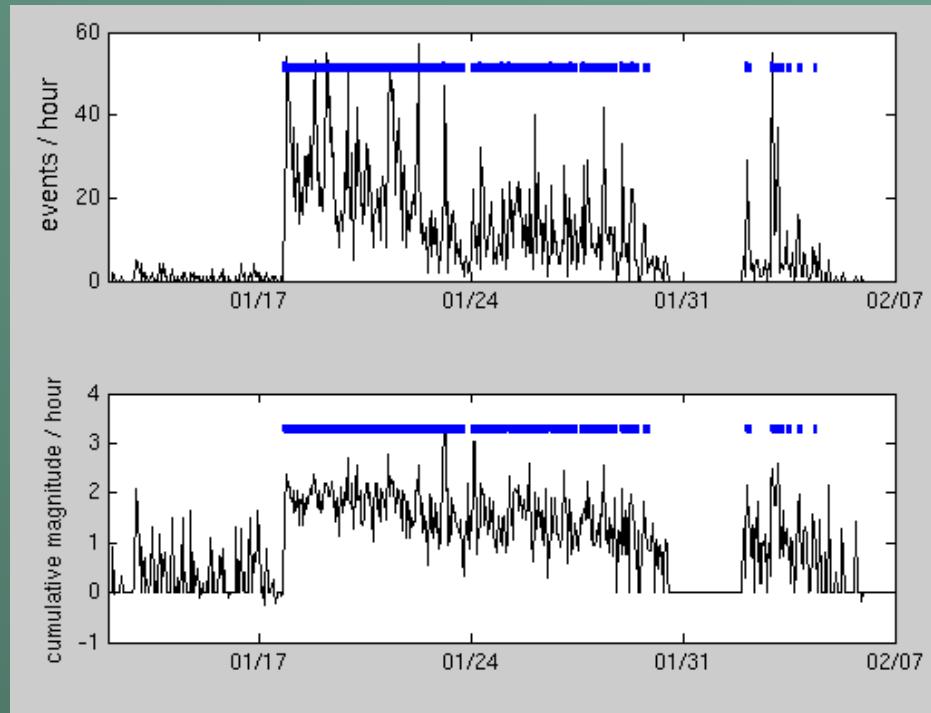

Yellowstone 2010: Swarm tracking parameters

Timewindow = 60 minutes

Reminder time = 99999 minutes (none)

Alarm type	Mean rate	Median rate	Mean ML	Cumulative ML
start	12			
end	6			
Escalation 1	24			
Escalation 2	48			

Yellowstone 2010 swarms

First alarm at 17-Jan 20:30 UT
Longest swarm 123 hours
16 swarms

Summary

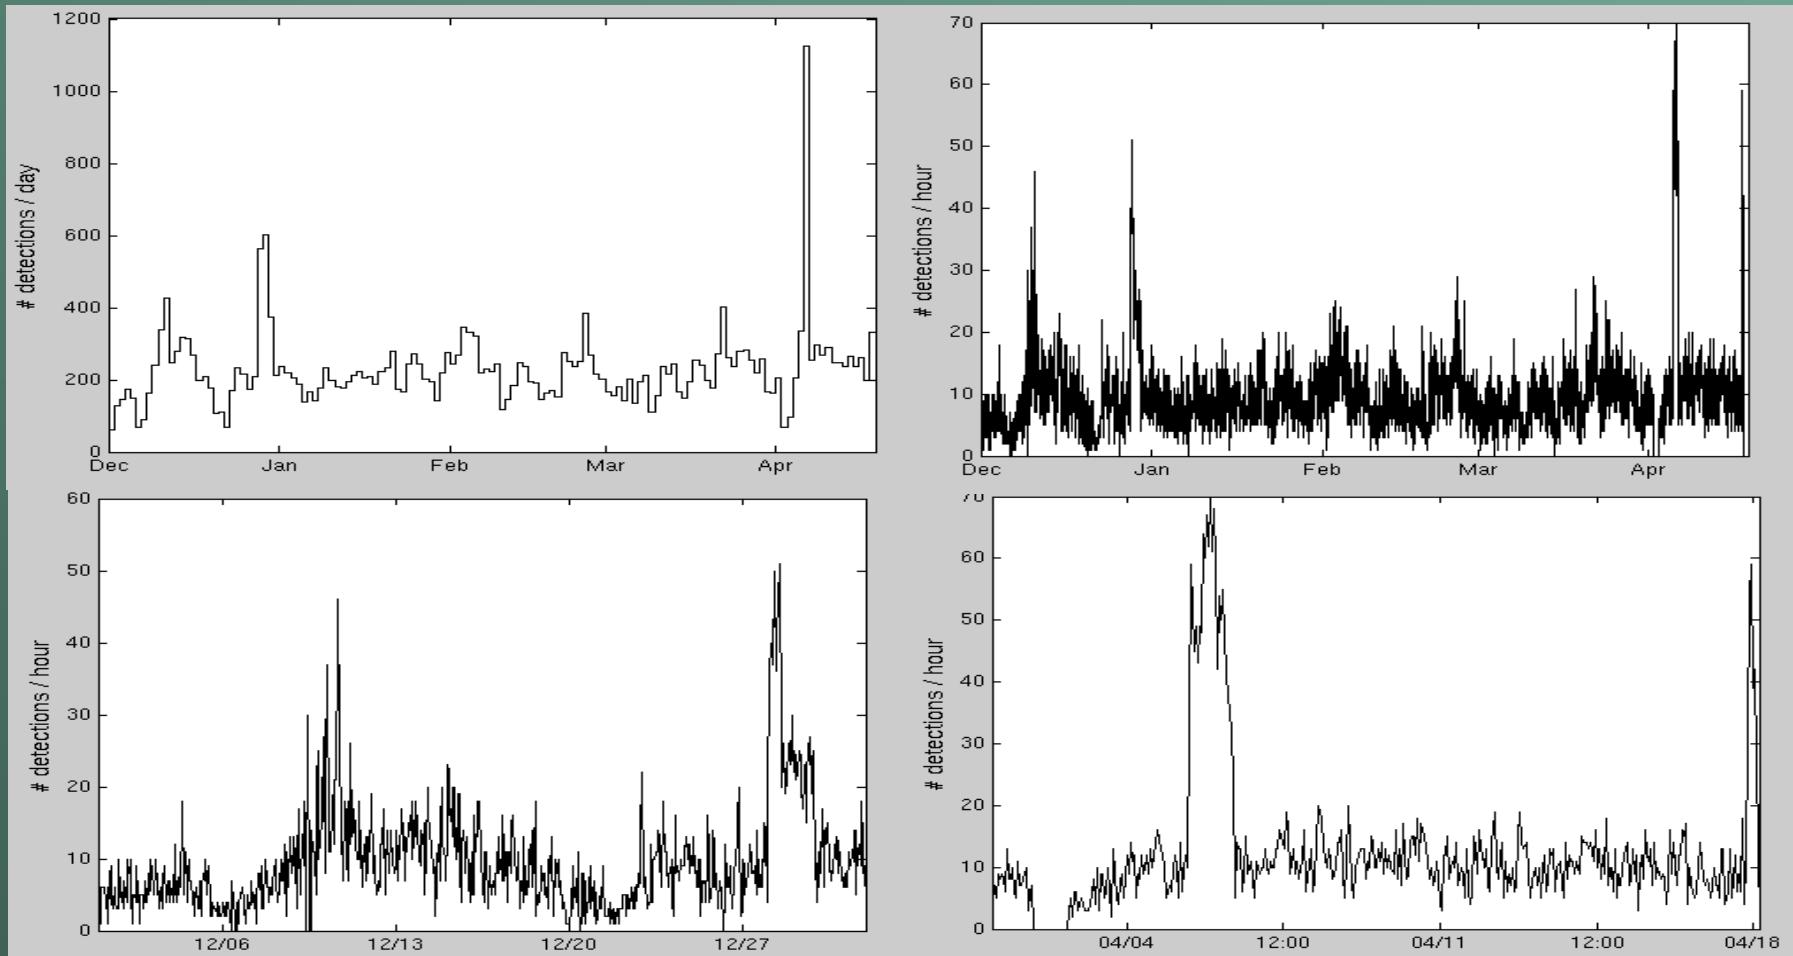

- Detect start, escalations and end of swarm
- Highly configurable – changes in event rates or energy release rate
- Generic alarm system – progressive countdowns for any alarm type
- Can work with carlstatrig/carlsubtrig
- Successful during Redoubt 2009 eruption – all 5 main episodes of swarms detected, no false alarms
- 3 hours warning for Okmok 2008 eruption

Further work:

- More testing on previous eruptions
- Configure for all Alaskan volcanoes
- Run in parallel & add diagnostic system (robustness)
- Develop alarm response system / procedures

Redoubt swarms Dec 2009 / Apr 2009

- Show up only on RSO (too small)
- Alarm system based on detections?

Generic alarm algorithm: An alternative approach?

- Treat tremor & swarms same way
- Input a timeseries for any metric (e.g. RSAM, reduced displacement, mean event rate, median event rate, mean magnitude, cumulative magnitude, detection rate)
- Compute mean & standard deviation for each hour except the most recent
- Is current timewindow outside mean + 2 (or 3) standard deviations?
- Yes – alarm.

Advantages:

- notification of rapid changes in any metric
- no thresholds to set
- rapid implementation of new alarm types
